

Web-Supplement for:  
**Streamlined Variational Inference for  
Higher Level Group-Specific Curve Models**

BY M. MENICTAS<sup>1</sup>, T.H. NOLAN<sup>1</sup>, D.G. SIMPSON<sup>2</sup> AND M.P. WAND<sup>1</sup>

*University of Technology Sydney<sup>1</sup> and University of Illinois<sup>2</sup>*

## S.1 Derivation of Result 1

Straightforward algebra can be used to verify that

$$\mathbf{C}^T \mathbf{R}_{\text{BLUP}}^{-1} \mathbf{C} + \mathbf{D}_{\text{BLUP}} = \mathbf{B}^T \mathbf{B} \quad \text{and} \quad \mathbf{C}^T \mathbf{R}_{\text{BLUP}}^{-1} \mathbf{y} = \mathbf{B}^T \mathbf{b}$$

where  $\mathbf{B}$  and  $\mathbf{b}$  have sparse forms (2.9) with non-zero sub-blocks equal to

$$\mathbf{b}_i \equiv \begin{bmatrix} \sigma_\varepsilon^{-1} \mathbf{y}_i \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{bmatrix}, \quad \mathbf{B}_i \equiv \begin{bmatrix} \sigma_\varepsilon^{-1} \mathbf{X}_i & \sigma_\varepsilon^{-1} \mathbf{Z}_{\text{glob},i} \\ \mathbf{0} & m^{-1/2} \sigma_{\text{glob}}^{-1} \mathbf{I}_{K_{\text{glob}}} \\ \mathbf{0} & \mathbf{0} \\ \mathbf{0} & \mathbf{0} \end{bmatrix} \quad \text{and} \quad \dot{\mathbf{B}}_i \equiv \begin{bmatrix} \sigma_\varepsilon^{-1} \mathbf{X}_i & \sigma_\varepsilon^{-1} \mathbf{Z}_{\text{grp},i} \\ \mathbf{0} & \mathbf{0} \\ \Sigma^{-1/2} & \mathbf{0} \\ \mathbf{0} & \sigma_{\text{grp}}^{-1} \mathbf{I}_{K_{\text{grp}}} \end{bmatrix}.$$

Therefore, in view of (2.6),

$$\begin{bmatrix} \hat{\beta} \\ \hat{\mathbf{u}} \end{bmatrix} = (\mathbf{B}^T \mathbf{B})^{-1} \mathbf{B}^T \mathbf{b} \quad \text{and} \quad \text{Cov} \left( \begin{bmatrix} \hat{\beta} \\ \hat{\mathbf{u}} - \mathbf{u} \end{bmatrix} \right) = (\mathbf{B}^T \mathbf{B})^{-1}.$$

The sub-blocks of

$$\text{Cov} \left( \begin{bmatrix} \hat{\beta} \\ \hat{\mathbf{u}} - \mathbf{u} \end{bmatrix} \right)$$

listed in (2.7) correspond to the non- $\times$  sub-blocks of  $\mathbf{A}^{-1} = (\mathbf{B}^T \mathbf{B})^{-1}$  where  $\mathbf{A}^{-1}$  is given by (2.10). The result follows immediately.

## S.2 Derivation of Algorithm 1

Algorithm 1 is simply a proceduralization of Result 1.

## S.3 The Inverse G-Wishart and Inverse $\chi^2$ Distributions

The Inverse G-Wishart corresponds to the matrix inverses of random matrices that have a *G-Wishart* distribution (e.g. Atay-Kayis & Massam, 2005). For any positive integer  $d$ , let  $G$  be an undirected graph with  $d$  nodes labeled  $1, \dots, d$  and set  $E$  consisting of sets of pairs of nodes that are connected by an edge. We say that the symmetric  $d \times d$  matrix  $\mathbf{M}$  respects  $G$  if

$$\mathbf{M}_{ij} = 0 \quad \text{for all } \{i, j\} \notin E.$$

A  $d \times d$  random matrix  $\mathbf{X}$  has an Inverse G-Wishart distribution with graph  $G$  and parameters  $\xi > 0$  and symmetric  $d \times d$  matrix  $\Lambda$ , written

$$\mathbf{X} \sim \text{Inverse-G-Wishart}(G, \xi, \Lambda)$$

if and only if the density function of  $\mathbf{X}$  satisfies

$$\mathfrak{p}(\mathbf{X}) \propto |\mathbf{X}|^{-(\xi+2)/2} \exp\{-\frac{1}{2}\text{tr}(\boldsymbol{\Lambda} \mathbf{X}^{-1})\}$$

over arguments  $\mathbf{X}$  such that  $\mathbf{X}$  is symmetric and positive definite and  $\mathbf{X}^{-1}$  respects  $G$ . Two important special cases are

$$G = G_{\text{full}} \equiv \text{totally connected } d\text{-node graph},$$

for which the Inverse G-Wishart distribution coincides with the ordinary Inverse Wishart distribution, and

$$G = G_{\text{diag}} \equiv \text{totally disconnected } d\text{-node graph},$$

for which the Inverse G-Wishart distribution coincides with a product of independent Inverse Chi-Squared random variables. The subscripts of  $G_{\text{full}}$  and  $G_{\text{diag}}$  reflect the fact that  $\mathbf{X}^{-1}$  is a full matrix and  $\mathbf{X}^{-1}$  is a diagonal matrix in each special case.

The  $G = G_{\text{full}}$  case corresponds to the ordinary Inverse Wishart distribution. However, with message passing in mind, we will work with the more general Inverse G-Wishart family throughout this article.

In the  $d = 1$  special case the graph  $G = G_{\text{full}} = G_{\text{diag}}$  and the Inverse G-Wishart distribution reduces to the Inverse Chi-Squared distributions. We write

$$x \sim \text{Inverse-}\chi^2(\xi, \lambda)$$

for this Inverse-G-Wishart( $G_{\text{diag}}, \xi, \lambda$ ) special case with  $d = 1$  and  $\lambda > 0$  scalar.

## S.4 Derivation of Result 2

It is straightforward to verify that the  $\boldsymbol{\mu}_{q(\beta, u)}$  and  $\boldsymbol{\Sigma}_{q(\beta, u)}$  updates, given at (2.12), may be written as

$$\boldsymbol{\mu}_{q(\beta, u)} \longleftarrow (\mathbf{B}^T \mathbf{B})^{-1} \mathbf{B}^T \mathbf{b} \quad \text{and} \quad \boldsymbol{\Sigma}_{q(\beta, u)} \longleftarrow (\mathbf{B}^T \mathbf{B})^{-1}$$

where  $\mathbf{B}$  and  $\mathbf{b}$  have the forms (2.9) with

$$\mathbf{b}_i \equiv \begin{bmatrix} \mu_{q(1/\sigma_\varepsilon^2)}^{1/2} \mathbf{y}_i \\ m^{-1/2} \boldsymbol{\Sigma}_\beta^{-1/2} \boldsymbol{\mu}_\beta \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{bmatrix}, \quad \mathbf{B}_i \equiv \begin{bmatrix} \mu_{q(1/\sigma_\varepsilon^2)}^{1/2} \mathbf{X}_i & \mu_{q(1/\sigma_\varepsilon^2)}^{1/2} \mathbf{Z}_{\text{glob}, i} \\ m^{-1/2} \boldsymbol{\Sigma}_\beta^{-1/2} & \mathbf{O} \\ \mathbf{O} & m^{-1/2} \mu_{q(1/\sigma_{\text{glob}}^2)}^{1/2} \mathbf{I}_{K_{\text{glob}}} \\ \mathbf{O} & \mathbf{O} \\ \mathbf{O} & \mathbf{O} \end{bmatrix}$$

and

$$\dot{\mathbf{B}}_i \equiv \begin{bmatrix} \mu_{q(1/\sigma_\varepsilon^2)}^{1/2} \mathbf{X}_i & \mu_{q(1/\sigma_\varepsilon^2)}^{1/2} \mathbf{Z}_{\text{grp}, i} \\ \mathbf{O} & \mathbf{O} \\ \mathbf{O} & \mathbf{O} \\ \mathbf{M}_{q(\boldsymbol{\Sigma}^{-1})}^{1/2} & \mathbf{O} \\ \mathbf{O} & \mu_{q(1/\sigma_{\text{grp}}^2)}^{1/2} \mathbf{I}_{K_{\text{grp}}} \end{bmatrix}.$$

Result 2 immediately follows from Theorem 2 of Nolan & Wand (2018).

## S.5 Derivation of Algorithm 2

We provide expressions for the  $\mathbf{q}$ -densities for mean field variational Bayesian inference for the parameters in (2.10), with product density restriction (2.11). Arguments analogous to those given in, for example, Appendix C of Wand & Ormerod (2011) lead to:

$$\mathbf{q}(\boldsymbol{\beta}, \mathbf{u}) \text{ is a } N(\boldsymbol{\mu}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u})}, \boldsymbol{\Sigma}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u})}) \text{ density function}$$

where

$$\boldsymbol{\Sigma}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u})} = (\mathbf{C}^T \mathbf{R}_{\text{MFVB}}^{-1} \mathbf{C} + \mathbf{D}_{\text{MFVB}})^{-1} \quad \text{and} \quad \boldsymbol{\mu}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u})} = \boldsymbol{\Sigma}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u})} (\mathbf{C}^T \mathbf{R}_{\text{MFVB}}^{-1} \mathbf{y} + \mathbf{o}_{\text{MFVB}})$$

with  $\mathbf{R}_{\text{MFVB}}$ ,  $\mathbf{D}_{\text{MFVB}}$  and  $\mathbf{o}_{\text{MFVB}}$  defined via (2.13),

$$\mathbf{q}(\sigma_\varepsilon^2) \text{ is an Inverse-}\chi^2(\xi_{\mathbf{q}(\sigma_\varepsilon^2)}, \lambda_{\mathbf{q}(\sigma_\varepsilon^2)}) \text{ density function}$$

where  $\xi_{\mathbf{q}(\sigma_\varepsilon^2)} = \nu_\varepsilon + \sum_{i=1}^m n_i$  and

$$\begin{aligned} \lambda_{\mathbf{q}(\sigma_\varepsilon^2)} &= \mu_{\mathbf{q}(1/a_\varepsilon)} + \sum_{i=1}^m E_{\mathbf{q}} \left\{ \left\| \mathbf{y}_i - \mathbf{C}_{\text{glob},i} \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{glob}} \end{bmatrix} - \mathbf{C}_{\text{grp},i} \begin{bmatrix} \mathbf{u}_{\text{lin},i} \\ \mathbf{u}_{\text{grp},i} \end{bmatrix} \right\|^2 \right\} \\ &= \mu_{\mathbf{q}(1/a_\varepsilon)} + \sum_{i=1}^m \left[ \left\| E_{\mathbf{q}} \left( \mathbf{y}_i - \mathbf{C}_{\text{glob},i} \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{glob}} \end{bmatrix} - \mathbf{C}_{\text{grp},i} \begin{bmatrix} \mathbf{u}_{\text{lin},i} \\ \mathbf{u}_{\text{grp},i} \end{bmatrix} \right) \right\|^2 \right. \\ &\quad \left. + \text{tr} \left\{ \text{Cov}_{\mathbf{q}} \left( \mathbf{C}_{\text{glob},i} \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{glob}} \end{bmatrix} + \mathbf{C}_{\text{grp},i} \begin{bmatrix} \mathbf{u}_{\text{lin},i} \\ \mathbf{u}_{\text{grp},i} \end{bmatrix} \right) \right\} \right] \\ &= \mu_{\mathbf{q}(1/a_\varepsilon)} + \sum_{i=1}^m \left\{ \left\| E_{\mathbf{q}} \left( \mathbf{y}_i - \mathbf{C}_{\text{glob},i} \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{glob}} \end{bmatrix} - \mathbf{C}_{\text{grp},i} \begin{bmatrix} \mathbf{u}_{\text{lin},i} \\ \mathbf{u}_{\text{grp},i} \end{bmatrix} \right) \right\|^2 \right. \\ &\quad \left. + \text{tr}(\mathbf{C}_{\text{glob},i}^T \mathbf{C}_{\text{glob},i} \boldsymbol{\Sigma}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u}_{\text{glob}})}) + \text{tr}(\mathbf{C}_{\text{grp},i}^T \mathbf{C}_{\text{grp},i} \boldsymbol{\Sigma}_{\mathbf{q}(\mathbf{u}_{\text{lin},i}, \mathbf{u}_{\text{grp},i}))} \right. \\ &\quad \left. + 2 \text{tr} \left[ \mathbf{C}_{\text{grp},i}^T \mathbf{C}_{\text{glob},i} E_{\mathbf{q}} \left\{ \left( \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{glob}} \end{bmatrix} - \boldsymbol{\mu}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u}_{\text{glob}})} \right) \times \right. \right. \right. \\ &\quad \left. \left. \left. \left( \begin{bmatrix} \mathbf{u}_{\text{lin},i} \\ \mathbf{u}_{\text{grp},i} \end{bmatrix} - \boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},i}, \mathbf{u}_{\text{grp},i})} \right)^T \right\} \right] \right\} \end{aligned}$$

where  $\mathbf{C}_{\text{glob},i} \equiv [\mathbf{X}_i \mathbf{Z}_{\text{glob},i}]$ ,  $\mathbf{C}_{\text{grp},i} \equiv [\mathbf{X}_i \mathbf{Z}_{\text{grp},i}]$ , and with reciprocal moment  $\mu_{\mathbf{q}(1/\sigma_\varepsilon^2)} = \xi_{\mathbf{q}(\sigma_\varepsilon^2)} / \lambda_{\mathbf{q}(\sigma_\varepsilon^2)}$ ,

$$\mathbf{q}(\sigma_{\text{glob}}^2) \text{ is an Inverse-}\chi^2(\xi_{\mathbf{q}(\sigma_{\text{glob}}^2)}, \lambda_{\mathbf{q}(\sigma_{\text{glob}}^2)}) \text{ density function}$$

where  $\xi_{\mathbf{q}(\sigma_{\text{glob}}^2)} = \nu_{\text{glob}} + K_{\text{glob}}$  and

$$\lambda_{\mathbf{q}(\sigma_{\text{glob}}^2)} = \mu_{\mathbf{q}(1/a_{\text{glob}})} + \|\boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{glob}})}\|^2 + \text{tr}(\boldsymbol{\Sigma}_{\mathbf{q}(\mathbf{u}_{\text{glob}})}),$$

with reciprocal moment  $\mu_{\mathbf{q}(1/\sigma_{\text{glob}}^2)} = \xi_{\mathbf{q}(\sigma_{\text{glob}}^2)} / \lambda_{\mathbf{q}(\sigma_{\text{glob}}^2)}$ ,

$$\mathbf{q}(\sigma_{\text{grp}}^2) \text{ is an Inverse-}\chi^2(\xi_{\mathbf{q}(\sigma_{\text{grp}}^2)}, \lambda_{\mathbf{q}(\sigma_{\text{grp}}^2)}) \text{ density function}$$

where  $\xi_{\mathbf{q}(\sigma_{\text{grp}}^2)} = \nu_{\text{grp}} + mK_{\text{grp}}$  and

$$\lambda_{\mathbf{q}(\sigma_{\text{grp}}^2)} = \mu_{\mathbf{q}(1/a_{\text{grp}})} + \sum_{i=1}^m \left\{ \|\boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{grp},i})}\|^2 + \text{tr}(\boldsymbol{\Sigma}_{\mathbf{q}(\mathbf{u}_{\text{grp},i})}) \right\},$$

with reciprocal moment  $\mu_{q(1/\sigma_{\text{grp}}^2)} = \xi_{q(\sigma_{\text{grp}}^2)}/\lambda_{q(\sigma_{\text{grp}}^2)}$ ,

$q(\Sigma)$  is an Inverse-G-Wishart  $(G_{\text{full}}, \xi_{q(\Sigma)}, \Lambda_{q(\Sigma)})$  density function

where  $\xi_{q(\Sigma)} = \nu_{\Sigma} + 2 + m$

$$\Lambda_{q(\Sigma)} = M_{q(A_{\Sigma}^{-1})} + \sum_{i=1}^m \left( \mu_{q(u_{\text{lin},i})} \mu_{q(u_{\text{lin},i})}^T + \Sigma_{q(u_{\text{lin},i})} \right),$$

with inverse moment  $M_{q(\Sigma^{-1})} = (\xi_{q(\Sigma)} - 1)\Lambda_{q(\Sigma)}^{-1}$ ,

$q(a_{\varepsilon})$  is an Inverse- $\chi^2(\xi_{q(a_{\varepsilon})}, \lambda_{q(a_{\varepsilon})})$  density function

where  $\xi_{q(a_{\varepsilon})} = \nu_{\varepsilon} + 1$ ,

$$\lambda_{q(a_{\varepsilon})} = \mu_{q(1/\sigma_{\varepsilon}^2)} + 1/(\nu_{\varepsilon} s_{\varepsilon}^2)$$

with reciprocal moment  $\mu_{q(1/a_{\varepsilon})} = \xi_{q(a_{\varepsilon})}/\lambda_{q(a_{\varepsilon})}$ ,

$q(a_{\text{glob}})$  is an Inverse- $\chi^2(\xi_{q(a_{\text{glob}})}, \lambda_{q(a_{\text{glob}})})$  density function

where  $\xi_{q(a_{\text{glob}})} = \nu_{\text{glob}} + 1$ ,

$$\lambda_{q(a_{\text{glob}})} = \mu_{q(1/\sigma_{\text{glob}}^2)} + 1/(\nu_{\text{glob}} s_{\text{glob}}^2)$$

with reciprocal moment  $\mu_{q(1/a_{\text{glob}})} = \xi_{q(a_{\text{glob}})}/\lambda_{q(a_{\text{glob}})}$ ,

$q(a_{\text{grp}})$  is an Inverse- $\chi^2(\xi_{q(a_{\text{grp}})}, \lambda_{q(a_{\text{grp}})})$  density function

where  $\xi_{q(a_{\text{grp}})} = \nu_{\text{grp}} + 1$ ,

$$\lambda_{q(a_{\text{grp}})} = \mu_{q(1/\sigma_{\text{grp}}^2)} + 1/(\nu_{\text{grp}} s_{\text{grp}}^2)$$

with reciprocal moment  $\mu_{q(1/a_{\text{grp}})} = \xi_{q(a_{\text{grp}})}/\lambda_{q(a_{\text{grp}})}$  and

$q(A_{\Sigma})$  is an Inverse-G-Wishart  $(G_{\text{diag}}, \xi_{q(A_{\Sigma})}, \Lambda_{q(A_{\Sigma})})$  density function

where  $\xi_{q(A_{\Sigma})} = \nu_{\Sigma} + 2$ ,

$$\Lambda_{q(A_{\Sigma})} = \text{diag}\{\text{diagonal}(M_{q(\Sigma^{-1})})\} + \Lambda_{A_{\Sigma}}$$

with inverse moment  $M_{q(A_{\Sigma}^{-1})} = \xi_{q(A_{\Sigma})}\Lambda_{q(A_{\Sigma})}^{-1}$ .

## S.6 Approximate Marginal Log-Likelihood for Two-Level Models

The expression for the lower bound on the marginal log-likelihood for Algorithm 2 is

$$\begin{aligned}
& \log \underline{\mathbf{p}}(\mathbf{y}; \mathbf{q}) = \\
& -\frac{1}{2} \log(\pi) \sum_{i=1}^m n_i - \frac{1}{2} \log |\boldsymbol{\Sigma}_{\beta}| - \frac{1}{2} \text{tr} \left( \boldsymbol{\Sigma}_{\beta}^{-1} \left\{ (\boldsymbol{\mu}_{q(\beta)} - \boldsymbol{\mu}_{\beta}) (\boldsymbol{\mu}_{q(\beta)} - \boldsymbol{\mu}_{\beta})^T + \boldsymbol{\Sigma}_{q(\beta)} \right\} \right) \\
& - \frac{1}{2} \text{tr} \left( \mathbf{M}_{q(\boldsymbol{\Sigma}^{-1})} \left\{ \sum_{i=1}^m (\boldsymbol{\mu}_{q(\mathbf{u}_{\text{lin},i})} \boldsymbol{\mu}_{q(\mathbf{u}_{\text{lin},i})}^T + \boldsymbol{\Sigma}_{q(\mathbf{u}_{\text{lin},i})}) \right\} \right) + \frac{1}{2} \{2 + K_{\text{gbl}} + m(2 + K_{\text{grp}})\} \\
& - \frac{1}{2} \mu_{q(1/\sigma_{\text{gbl}}^2)} \left\{ \|\boldsymbol{\mu}_{q(\mathbf{u}_{\text{gbl}})}\|^2 + \text{tr}(\boldsymbol{\Sigma}_{q(\mathbf{u}_{\text{gbl}})}) \right\} - \frac{1}{2} \mu_{q(1/\sigma_{\text{grp}}^2)} \sum_{i=1}^m \left\{ \|\boldsymbol{\mu}_{q(\mathbf{u}_{\text{grp},i})}\|^2 + \text{tr}(\boldsymbol{\Sigma}_{q(\mathbf{u}_{\text{grp},i})}) \right\} \\
& + \frac{1}{2} \log |\boldsymbol{\Sigma}_{\beta}| + \{\nu_{\Sigma} + m + 1 + \frac{1}{2}(\nu_{\varepsilon} + \nu_{\text{gbl}} + K_{\text{gbl}} + \nu_{\text{grp}} + mK_{\text{grp}})\} \log(2) - \log \Gamma(\frac{\nu_{\varepsilon}}{2}) \\
& - \frac{1}{2} \mu_{q(1/a_{\varepsilon})} \mu_{q(1/\sigma_{\varepsilon}^2)} - \frac{1}{2} \xi_{q(\sigma_{\varepsilon}^2)} \log(\lambda_{q(\sigma_{\varepsilon}^2)}) + \log\{\Gamma(\frac{1}{2}\xi_{q(\sigma_{\varepsilon}^2)})\} + \frac{1}{2} \lambda_{q(\sigma_{\varepsilon}^2)} \mu_{q(1/\sigma_{\varepsilon}^2)} - \frac{1}{2} \log(\nu_{\varepsilon} s_{\varepsilon}^2) \\
& - 3 \log\{\Gamma(\frac{1}{2})\} - \frac{1}{2\nu_{\varepsilon} s_{\varepsilon}^2} \mu_{q(1/a_{\varepsilon})} - \frac{1}{2} \xi_{q(a_{\varepsilon})} \log(\lambda_{q(a_{\varepsilon})}) + \log\{\Gamma(\frac{1}{2}\xi_{q(a_{\varepsilon})})\} + \frac{1}{2} \lambda_{q(a_{\varepsilon})} \mu_{q(1/a_{\varepsilon})} \\
& - \log\Gamma(\frac{\nu_{\text{gbl}}}{2}) - \frac{1}{2} \mu_{q(1/a_{\text{gbl}})} \mu_{q(1/\sigma_{\text{gbl}}^2)} - \frac{1}{2} \xi_{q(\sigma_{\text{gbl}}^2)} \log(\lambda_{q(\sigma_{\text{gbl}}^2)}) + \log\{\Gamma(\frac{1}{2}\xi_{q(\sigma_{\text{gbl}}^2)})\} - \frac{1}{2} \log(\nu_{\text{gbl}} s_{\text{gbl}}^2) \\
& + \frac{1}{2} \lambda_{q(\sigma_{\text{gbl}}^2)} \mu_{q(1/\sigma_{\text{gbl}}^2)} - \{1/(2\nu_{\text{gbl}} s_{\text{gbl}}^2)\} \mu_{q(1/a_{\text{gbl}})} - \frac{1}{2} \xi_{q(a_{\text{gbl}})} \log(\lambda_{q(a_{\text{gbl}})}) - \frac{1}{2} \mu_{q(1/a_{\text{grp}})} \mu_{q(1/\sigma_{\text{grp}}^2)} \\
& + \log\{\Gamma(\frac{1}{2}\xi_{q(a_{\text{gbl}})})\} + \frac{1}{2} \lambda_{q(a_{\text{gbl}})} \mu_{q(1/a_{\text{gbl}})} - \log\Gamma(\frac{\nu_{\text{grp}}}{2}) + \log\{\Gamma(\frac{1}{2}\xi_{q(\sigma_{\text{grp}}^2)})\} - \frac{1}{2} \log(\nu_{\text{grp}} s_{\text{grp}}^2) \\
& - \frac{1}{2} \xi_{q(\sigma_{\text{grp}}^2)} \log(\lambda_{q(\sigma_{\text{grp}}^2)}) + \frac{1}{2} \lambda_{q(\sigma_{\text{grp}}^2)} \mu_{q(1/\sigma_{\text{grp}}^2)} - \{1/(2\nu_{\text{grp}} s_{\text{grp}}^2)\} \mu_{q(1/a_{\text{grp}})} - \frac{1}{2} \xi_{q(a_{\text{grp}})} \log(\lambda_{q(a_{\text{grp}})}) \\
& + \log\{\Gamma(\frac{1}{2}\xi_{q(a_{\text{grp}})})\} + \frac{1}{2} \lambda_{q(a_{\text{grp}})} \mu_{q(1/a_{\text{grp}})} - \frac{1}{2} \text{tr}(\mathbf{M}_{q(\mathbf{A}_{\Sigma}^{-1})} \mathbf{M}_{q(\boldsymbol{\Sigma}^{-1})}) + \frac{1}{2} \text{tr}(\mathbf{\Lambda}_{q(\boldsymbol{\Sigma})} \mathbf{M}_{q(\boldsymbol{\Sigma}^{-1})}) \\
& + \sum_{j=1}^2 \log\Gamma(\frac{1}{2}(\xi_{q(\mathbf{A}_{\Sigma})} + 2 - j)) - \sum_{j=1}^2 \log\Gamma(\frac{1}{2}(\nu_{\Sigma} + 4 - j)) - \frac{1}{2} (\xi_{q(\boldsymbol{\Sigma})} - 1) \log |\mathbf{\Lambda}_{q(\boldsymbol{\Sigma})}| \\
& + \sum_{j=1}^2 \log\Gamma(\frac{1}{2}(\xi_{q(\boldsymbol{\Sigma})} + 2 - j)) - \frac{1}{2} \sum_{j=1}^2 1/(\nu_{\Sigma} s_{\Sigma,j}^2) (\mathbf{M}_{q(\mathbf{A}_{\Sigma}^{-1})})_{jj} - \sum_{j=1}^2 \log\Gamma(\frac{1}{2}(3 - j)) \\
& - \frac{1}{2} (\xi_{q(\mathbf{A}_{\Sigma})} - 1) \log |\mathbf{\Lambda}_{q(\mathbf{A}_{\Sigma})}| + \frac{1}{2} \text{tr}(\mathbf{\Lambda}_{q(\mathbf{A}_{\Sigma})} \mathbf{M}_{q(\mathbf{A}_{\Sigma}^{-1})}) \\
& - \frac{1}{2} \mu_{q(1/\sigma_{\varepsilon}^2)} \sum_{i=1}^m \left\{ \left\| E_q \left( \mathbf{y}_i - \mathbf{C}_{\text{gbl},i} \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{gbl},i} \end{bmatrix} - \mathbf{C}_{\text{grp},i} \begin{bmatrix} \mathbf{u}_{\text{lin},i} \\ \mathbf{u}_{\text{grp},i} \end{bmatrix} \right) \right\|^2 \right. \\
& \quad \left. + \text{tr}(\mathbf{C}_{\text{gbl},i}^T \mathbf{C}_{\text{gbl},i} \boldsymbol{\Sigma}_{q(\beta, \mathbf{u}_{\text{gbl}})}) + \text{tr}(\mathbf{C}_{\text{grp},i}^T \mathbf{C}_{\text{grp},i} \boldsymbol{\Sigma}_{q(\mathbf{u}_{\text{lin},i}, \mathbf{u}_{\text{grp},i}))} \right. \\
& \quad \left. + 2 \text{tr} \left[ \mathbf{C}_{\text{grp},i}^T \mathbf{C}_{\text{gbl},i} E_q \left\{ \left( \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{gbl}} \end{bmatrix} - \boldsymbol{\mu}_{q(\beta, \mathbf{u}_{\text{gbl}})} \right) \times \right. \right. \right. \\
& \quad \left. \left. \left. \left( \begin{bmatrix} \mathbf{u}_{\text{lin},i} \\ \mathbf{u}_{\text{grp},i} \end{bmatrix} - \boldsymbol{\mu}_{q(\mathbf{u}_{\text{lin},i}, \mathbf{u}_{\text{grp},i}))} \right)^T \right\} \right] \right\}. \tag{S.1}
\end{aligned}$$

*Derivation:* The lower-bound on the marginal log-likelihood is achieved through the following expression:

$$\begin{aligned}
\log \underline{\mathbf{p}}(\mathbf{y}; \mathbf{q}) &= E_q \{ \log \mathbf{p}(\mathbf{y}, \boldsymbol{\beta}, \mathbf{u}, \sigma_{\varepsilon}^2, a_{\varepsilon}, \sigma_{\text{gbl}}^2, a_{\text{gbl}}, \sigma_{\text{grp}}^2, a_{\text{grp}}, \boldsymbol{\Sigma}, \mathbf{A}_{\Sigma}) \\
&\quad - \log \mathbf{q}^*(\boldsymbol{\beta}, \mathbf{u}, \sigma_{\varepsilon}^2, a_{\varepsilon}, \sigma_{\text{gbl}}^2, a_{\text{gbl}}, \sigma_{\text{grp}}^2, a_{\text{grp}}, \boldsymbol{\Sigma}, \mathbf{A}_{\Sigma}) \}
\end{aligned}$$

$$\begin{aligned}
&= E_{\mathbf{q}}\{\log \mathbf{p}(\mathbf{y} | \boldsymbol{\beta}, \mathbf{u}, \sigma_{\varepsilon}^2)\} \\
&\quad + E_{\mathbf{q}}\{\log \mathbf{p}(\boldsymbol{\beta}, \mathbf{u} | \sigma_{\text{gbl}}^2, \sigma_{\text{grp}}^2, \Sigma)\} - E_{\mathbf{q}}\{\log \mathbf{q}^*(\boldsymbol{\beta}, \mathbf{u})\} \\
&\quad + E_{\mathbf{q}}\{\log \mathbf{p}(\sigma_{\varepsilon}^2 | a_{\varepsilon})\} - E_{\mathbf{q}}\{\log \mathbf{q}^*(\sigma_{\varepsilon}^2)\} + E_{\mathbf{q}}\{\log \mathbf{p}(a_{\varepsilon})\} - E_{\mathbf{q}}\{\log \mathbf{q}^*(a_{\varepsilon})\} \\
&\quad + E_{\mathbf{q}}\{\log \mathbf{p}(\sigma_{\text{gbl}}^2 | a_{\text{gbl}})\} - E_{\mathbf{q}}\{\log \mathbf{q}^*(\sigma_{\text{gbl}}^2)\} + E_{\mathbf{q}}\{\log \mathbf{p}(a_{\text{gbl}})\} - E_{\mathbf{q}}\{\log \mathbf{q}^*(a_{\text{gbl}})\} \\
&\quad + E_{\mathbf{q}}\{\log \mathbf{p}(\sigma_{\text{grp}}^2 | a_{\text{grp}})\} - E_{\mathbf{q}}\{\log \mathbf{q}^*(\sigma_{\text{grp}}^2)\} + E_{\mathbf{q}}\{\log \mathbf{p}(a_{\text{grp}})\} - E_{\mathbf{q}}\{\log \mathbf{q}^*(a_{\text{grp}})\} \\
&\quad + E_{\mathbf{q}}\{\log \mathbf{p}(\Sigma | \mathbf{A}_{\Sigma})\} - E_{\mathbf{q}}\{\log \mathbf{q}^*(\Sigma)\} + E_{\mathbf{q}}\{\log \mathbf{p}(\mathbf{A}_{\Sigma})\} - E_{\mathbf{q}}\{\log \mathbf{q}^*(\mathbf{A}_{\Sigma})\}.
\end{aligned}$$

First we note that

$$\log \mathbf{p}(\mathbf{y} | \boldsymbol{\beta}, \mathbf{u}, \sigma_{\varepsilon}^2) = -\frac{1}{2} \log(2\pi) \sum_{i=1}^m n_i - \frac{1}{2} \log(\sigma_{\varepsilon}^2) \sum_{i=1}^m n_i - \frac{1}{2\sigma_{\varepsilon}^2} \sum_{i=1}^m \|\mathbf{y} - \mathbf{X}\boldsymbol{\beta} - \mathbf{Z}\mathbf{u}\|^2$$

where

$$\begin{aligned}
&\|\mathbf{y} - \mathbf{X}\boldsymbol{\beta} - \mathbf{Z}\mathbf{u}\|^2 \\
&= \left\| \begin{bmatrix} \mathbf{y}_1 \\ \vdots \\ \mathbf{y}_m \end{bmatrix} - \begin{bmatrix} \mathbf{X}_1 \\ \vdots \\ \mathbf{X}_m \end{bmatrix} \boldsymbol{\beta} - \begin{bmatrix} \mathbf{Z}_{\text{gbl},1} \\ \vdots \\ \mathbf{Z}_{\text{gbl},m} \end{bmatrix} \mathbf{u}_{\text{gbl}} - \underset{1 \leq i \leq m}{\text{blockdiag}}([\mathbf{X}_i \mathbf{Z}_{\text{grp},i}]) \begin{bmatrix} \mathbf{u}_{\text{lin},i} \\ \mathbf{u}_{\text{grp},i} \end{bmatrix} \right\|_1^2 \\
&= \sum_{i=1}^m \|\mathbf{y}_i - \mathbf{X}_i \boldsymbol{\beta} - \mathbf{Z}_{\text{gbl},i} \mathbf{u}_{\text{gbl},i} - \mathbf{X}_i \mathbf{u}_{\text{lin},i} - \mathbf{Z}_{\text{grp},i} \mathbf{u}_{\text{grp},i}\|^2 \\
&= \sum_{i=1}^m \left\| \mathbf{y}_i - \mathbf{C}_{\text{gbl},i} \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{gbl},i} \end{bmatrix} - \mathbf{C}_{\text{grp},i} \begin{bmatrix} \mathbf{u}_{\text{lin},i} \\ \mathbf{u}_{\text{grp},i} \end{bmatrix} \right\|^2
\end{aligned}$$

and

$$\mathbf{C}_{\text{gbl},i} \equiv [\mathbf{X}_i \mathbf{Z}_{\text{gbl},i}], \quad \mathbf{C}_{\text{grp},i} \equiv [\mathbf{X}_i \mathbf{Z}_{\text{grp},i}].$$

Therefore,

$$\begin{aligned}
&E_{\mathbf{q}}\{\log \mathbf{p}(\mathbf{y} | \boldsymbol{\beta}, \mathbf{u}, \sigma_{\varepsilon}^2)\} \\
&= -\frac{1}{2} \log(2\pi) \sum_{i=1}^m n_i - \frac{1}{2} E_{\mathbf{q}}\{\log(\sigma_{\varepsilon}^2)\} \sum_{i=1}^m n_i \\
&\quad - \frac{1}{2} \mu_{\mathbf{q}(1/\sigma_{\varepsilon}^2)} \sum_{i=1}^m \left\{ \left\| E_{\mathbf{q}} \left( \mathbf{y}_i - \mathbf{C}_{\text{gbl},i} \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{gbl},i} \end{bmatrix} - \mathbf{C}_{\text{grp},i} \begin{bmatrix} \mathbf{u}_{\text{lin},i} \\ \mathbf{u}_{\text{grp},i} \end{bmatrix} \right) \right\|^2 \right. \\
&\quad + \text{tr}(\mathbf{C}_{\text{gbl},i}^T \mathbf{C}_{\text{gbl},i} \Sigma_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u}_{\text{gbl}})}) + \text{tr}(\mathbf{C}_{\text{grp},i}^T \mathbf{C}_{\text{grp},i} \Sigma_{\mathbf{q}(\mathbf{u}_{\text{lin},i}, \mathbf{u}_{\text{grp},i})}) \\
&\quad \left. + 2 \text{tr} \left[ \mathbf{C}_{\text{grp},i}^T \mathbf{C}_{\text{gbl},i} E_{\mathbf{q}} \left\{ \left( \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{gbl}} \end{bmatrix} - \boldsymbol{\mu}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u}_{\text{gbl}})} \right) \left( \begin{bmatrix} \mathbf{u}_{\text{lin},i} \\ \mathbf{u}_{\text{grp},i} \end{bmatrix} - \boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},i}, \mathbf{u}_{\text{grp},i})} \right)^T \right\} \right] \right\}
\end{aligned}$$

The remainder of the expectations in (S.4) are expressed as:

$$\begin{aligned}
E_{\mathbf{q}}\{\log \mathbf{p}(\boldsymbol{\beta}, \mathbf{u} | \sigma_{\text{gbl}}^2, \sigma_{\text{grp}}^2, \Sigma)\} &= -\frac{1}{2} \{2 + K_{\text{gbl}} + m(2 + K_{\text{grp}})\} \log(2\pi) - \frac{1}{2} \log |\Sigma_{\boldsymbol{\beta}}| \\
&\quad - \frac{K_{\text{gbl}}}{2} E_{\mathbf{q}}\{\log(\sigma_{\text{gbl}}^2)\} - \frac{m}{2} E_{\mathbf{q}}\{\log |\Sigma|\} - \frac{m K_{\text{grp}}}{2} E_{\mathbf{q}}\{\log(\sigma_{\text{grp}}^2)\} \\
&\quad - \frac{1}{2} \text{tr} \left( \Sigma_{\boldsymbol{\beta}}^{-1} \left\{ (\boldsymbol{\mu}_{\mathbf{q}(\boldsymbol{\beta})} - \boldsymbol{\mu}_{\boldsymbol{\beta}}) (\boldsymbol{\mu}_{\mathbf{q}(\boldsymbol{\beta})} - \boldsymbol{\mu}_{\boldsymbol{\beta}})^T + \Sigma_{\mathbf{q}(\boldsymbol{\beta})} \right\} \right) \\
&\quad - \frac{1}{2} \mu_{\mathbf{q}(1/\sigma_{\text{gbl}}^2)} \left\{ \|\boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{gbl}})}\|^2 + \text{tr}(\Sigma_{\mathbf{q}(\mathbf{u}_{\text{gbl}})}) \right\} \\
&\quad - \frac{1}{2} \text{tr} \left( \mathbf{M}_{\mathbf{q}(\Sigma^{-1})} \left\{ \sum_{i=1}^m (\boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},i})} \boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},i})}^T + \Sigma_{\mathbf{q}(\mathbf{u}_{\text{lin},i})}) \right\} \right) \\
&\quad - \frac{1}{2} \mu_{\mathbf{q}(1/\sigma_{\text{grp}}^2)} \sum_{i=1}^m \left\{ \|\boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{grp},i})}\|^2 + \text{tr}(\Sigma_{\mathbf{q}(\mathbf{u}_{\text{grp},i})}) \right\}
\end{aligned}$$

$$\begin{aligned}
E_{\mathbf{q}}\{\log \mathbf{q}^*(\boldsymbol{\beta}, \mathbf{u})\} &= -\frac{1}{2}\{2 + K_{\text{gbl}} + m(2 + K_{\text{grp}})\} - \frac{1}{2}\{2 + K_{\text{gbl}} + m(2 + K_{\text{grp}})\} \log(2\pi) \\

E_{\mathbf{q}}[\log \mathbf{p}(\mathbf{A}_{\boldsymbol{\Sigma}})] &= -\frac{3}{2}E_{\mathbf{q}}\{\log |\mathbf{A}_{\boldsymbol{\Sigma}}|\} - \frac{1}{2}\sum_{j=1}^2 1/(\nu_{\boldsymbol{\Sigma}}s_{\boldsymbol{\Sigma}, j}^2) \left(\mathbf{M}_{\mathbf{q}(\mathbf{A}_{\boldsymbol{\Sigma}}^{-1})}\right)_{jj} - 2 \log(2) - \frac{1}{2} \log(\pi) \\
&\quad - \sum_{j=1}^2 \log \Gamma(\frac{1}{2}(3 - j)) \\
E_{\mathbf{q}}[\log \mathbf{q}(\mathbf{A}_{\boldsymbol{\Sigma}})] &= \frac{1}{2}(\xi_{\mathbf{q}(\mathbf{A}_{\boldsymbol{\Sigma}})} - 1) \log |\mathbf{A}_{\mathbf{q}(\mathbf{A}_{\boldsymbol{\Sigma}})}| - \frac{1}{2}(\xi_{\mathbf{q}(\mathbf{A}_{\boldsymbol{\Sigma}})} + 2)E_{\mathbf{q}}\{\log |\mathbf{A}_{\boldsymbol{\Sigma}}|\} - \frac{1}{2}\text{tr}(\mathbf{A}_{\mathbf{q}(\mathbf{A}_{\boldsymbol{\Sigma}})}\mathbf{M}_{\mathbf{q}(\mathbf{A}_{\boldsymbol{\Sigma}}^{-1})}) \\
&\quad - (\xi_{\mathbf{q}(\mathbf{A}_{\boldsymbol{\Sigma}})} + 1) \log(2) - \frac{1}{2} \log(\pi) - \sum_{j=1}^2 \log \Gamma(\frac{1}{2}(\xi_{\mathbf{q}(\mathbf{A}_{\boldsymbol{\Sigma}})} + 2 - j))
\end{aligned}$$

In the summation of each of these  $\log \underline{\mathbf{p}}(\mathbf{y}; \mathbf{q})$  terms, note that the coefficient of  $E_{\mathbf{q}}\{\log(\sigma_{\varepsilon}^2)\}$  is

$$-\frac{1}{2} \sum_{i=1}^m n_i - \frac{1}{2}\nu_{\varepsilon} - 1 + \frac{1}{2}\xi_{\mathbf{q}(\sigma_{\varepsilon}^2)} + 1 = -\frac{1}{2} \sum_{i=1}^m n_i - \frac{1}{2}\nu_{\varepsilon} - 1 + \frac{1}{2}(\nu_{\varepsilon} + \sum_{i=1}^m n_i) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log(\sigma_{\text{gbl}}^2)\}$  is

$$-\frac{1}{2}K_{\text{gbl}} - \frac{1}{2}\nu_{\text{gbl}} - 1 + \frac{1}{2}\xi_{\mathbf{q}}(\sigma_{\text{gbl}}^2) + 1 = -\frac{1}{2}K_{\text{gbl}} - \frac{1}{2}\nu_{\text{gbl}} - 1 + \frac{1}{2}(\nu_{\text{gbl}} + K_{\text{gbl}}) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log(\sigma_{\text{grp}}^2)\}$  is

$$-\frac{1}{2}mK_{\text{grp}} - \frac{1}{2}\nu_{\text{grp}} - 1 + \frac{1}{2}\xi_{\mathbf{q}}(\sigma_{\text{grp}}^2) + 1 = -\frac{1}{2}mK_{\text{grp}} - \frac{1}{2}\nu_{\text{grp}} - 1 + \frac{1}{2}(\nu_{\text{grp}} + mK_{\text{grp}}) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log|\boldsymbol{\Sigma}|\}$  is

$$-\frac{m}{2} - \frac{1}{2}(\nu_{\boldsymbol{\Sigma}} + 4) + \frac{1}{2}(\xi_{\mathbf{q}}(\boldsymbol{\Sigma}) + 2) = -\frac{1}{2}(m + \nu_{\boldsymbol{\Sigma}} + 4) + \frac{1}{2}(m + \nu_{\boldsymbol{\Sigma}} + 4) = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log(a_{\varepsilon})\}$  is

$$-\frac{1}{2}\nu_{\varepsilon} - \frac{1}{2} - 1 + \frac{1}{2}\xi_{\mathbf{q}}(a_{\varepsilon}) + 1 = -\frac{1}{2}\nu_{\varepsilon} - \frac{1}{2} - 1 + \frac{1}{2}(\nu_{\varepsilon} + 1) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log(a_{\text{gbl}})\}$  is

$$-\frac{1}{2}\nu_{\text{gbl}} - \frac{1}{2} - 1 + \frac{1}{2}\xi_{\mathbf{q}}(a_{\text{gbl}}) + 1 = -\frac{1}{2}\nu_{\text{gbl}} - \frac{1}{2} - 1 + \frac{1}{2}(\nu_{\text{gbl}} + 1) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log(a_{\text{grp}})\}$  is

$$-\frac{1}{2}\nu_{\text{grp}} - \frac{1}{2} - 1 + \frac{1}{2}\xi_{\mathbf{q}}(a_{\text{grp}}) + 1 = -\frac{1}{2}\nu_{\text{grp}} - \frac{1}{2} - 1 + \frac{1}{2}(\nu_{\text{grp}} + 1) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log|\boldsymbol{A}_{\boldsymbol{\Sigma}}|\}$  is

$$-\frac{1}{2}(\nu_{\boldsymbol{\Sigma}} + 1) - \frac{3}{2} + \frac{1}{2}(\xi_{\mathbf{q}}(\boldsymbol{A}_{\boldsymbol{\Sigma}}) + 2) = -\frac{1}{2}(\nu_{\boldsymbol{\Sigma}} + 2) + \frac{1}{2}(\nu_{\boldsymbol{\Sigma}} + 2) = 0.$$

Therefore, these terms can be dropped and the approximate marginal log-likelihood expression in (S.1) results.

## S.7 Derivation of Result 3

If  $\mathbf{B}$  and  $\mathbf{b}$  have the same forms given by equation (7) in Nolan & Wand (2018) with

$$\begin{aligned} \mathbf{b}_{ij} &\equiv \begin{bmatrix} \sigma_{\varepsilon}^{-1} \mathbf{y}_{ij} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{bmatrix}, \quad \mathbf{B}_{ij} \equiv \begin{bmatrix} \sigma_{\varepsilon}^{-1} \mathbf{X}_{ij} & \sigma_{\varepsilon}^{-1} \mathbf{Z}_{\text{gbl},ij} \\ \mathbf{O} & (\sum_{i=1}^m n_i)^{-1/2} \sigma_{\text{gbl}}^{-1} \mathbf{I}_{K_{\text{gbl}}} \\ \mathbf{O} & \mathbf{O} \\ \mathbf{O} & \mathbf{O} \\ \mathbf{O} & \mathbf{O} \\ \mathbf{O} & \mathbf{O} \end{bmatrix}, \\ \dot{\mathbf{B}}_{ij} &\equiv \begin{bmatrix} \sigma_{\varepsilon}^{-1} \mathbf{X}_{ij} & \sigma_{\varepsilon}^{-1} \mathbf{Z}_{\text{grp},ij}^g \\ \mathbf{O} & \mathbf{O} \\ n_i^{-1/2} \boldsymbol{\Sigma}_g^{-1/2} & \mathbf{O} \\ \mathbf{O} & n_i^{-1/2} \sigma_{\text{grp},g}^{-1} \mathbf{I}_{K_{\text{grp}}^g} \\ \mathbf{O} & \mathbf{O} \\ \mathbf{O} & \mathbf{O} \end{bmatrix} \quad \text{and} \quad \ddot{\mathbf{B}}_{ij} \equiv \begin{bmatrix} \sigma_{\varepsilon}^{-1} \mathbf{X}_{ij} & \sigma_{\varepsilon}^{-1} \mathbf{Z}_{\text{grp},ij}^h \\ \mathbf{O} & \mathbf{O} \\ \mathbf{O} & \mathbf{O} \\ \mathbf{O} & \mathbf{O} \\ \boldsymbol{\Sigma}_h^{-1/2} & \mathbf{O} \\ \mathbf{O} & \sigma_{\text{grp},h}^{-1} \mathbf{I}_{K_{\text{grp}}^h} \end{bmatrix}, \end{aligned}$$

then straightforward algebra leads to

$$\mathbf{B}^T \mathbf{B} = \mathbf{C}^T \mathbf{R}_{\text{BLUP}}^{-1} \mathbf{C} + \mathbf{D}_{\text{BLUP}} \quad \text{and} \quad \mathbf{B}^T \mathbf{b} = \mathbf{C}^T \mathbf{R}_{\text{BLUP}}^{-1} \mathbf{y}$$

where

$$\mathbf{C} \equiv [\mathbf{X} \ \mathbf{Z}], \quad \mathbf{D}_{\text{BLUP}} \equiv \begin{bmatrix} \mathbf{O} & \mathbf{O} \\ \mathbf{O} & \mathbf{G}^{-1} \end{bmatrix} \quad \text{and} \quad \mathbf{R}_{\text{BLUP}} \equiv \sigma_{\varepsilon}^2 \mathbf{I}, \quad (\text{S.2})$$

and  $\mathbf{G}$  as defined in (3.3). The remainder of the derivation of Result 3 is analogous to that of Result 1.

## S.8 Derivation of Algorithm 3

Algorithm 3 is simply a proceduralization of Result 3.

## S.9 Derivation of Result 4

It is straightforward to verify that the  $\boldsymbol{\mu}_{q(\beta, u)}$  and  $\Sigma_{q(\beta, u)}$  updates, given at (2.12) but with  $\mathbf{D}_{\text{MFVB}}$  as given in (3.6), may be written as

$$\boldsymbol{\mu}_{q(\beta, u)} \longleftarrow (\mathbf{B}^T \mathbf{B})^{-1} \mathbf{B}^T \mathbf{b} \quad \text{and} \quad \Sigma_{q(\beta, u)} \longleftarrow (\mathbf{B}^T \mathbf{B})^{-1}$$

where  $\mathbf{B}$  and  $\mathbf{b}$  have the forms given by equation (7) in Nolan & Wand (2018) with

$$\mathbf{b}_{ij} \equiv \begin{bmatrix} \mu_{q(1/\sigma_{\varepsilon}^2)}^{1/2} \mathbf{y}_{ij} \\ (\sum_{i=1}^m n_i)^{-1/2} \boldsymbol{\Sigma}_{\beta}^{-1/2} \boldsymbol{\mu}_{\beta} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \\ \mathbf{0} \end{bmatrix}, \quad \mathbf{B}_{ij} \equiv \begin{bmatrix} \mu_{q(1/\sigma_{\varepsilon}^2)}^{1/2} \mathbf{X}_{ij} & \mu_{q(1/\sigma_{\varepsilon}^2)}^{1/2} \mathbf{Z}_{\text{glob},ij} \\ (\sum_{i=1}^m n_i)^{-1/2} \boldsymbol{\Sigma}_{\beta}^{-1/2} & \mathbf{0} \\ \mathbf{0} & (\sum_{i=1}^m n_i)^{-1/2} \mu_{q(1/\sigma_{\text{glob}}^2)}^{1/2} \mathbf{I}_{K_{\text{glob}}} \\ \mathbf{0} & \mathbf{0} \\ \mathbf{0} & \mathbf{0} \\ \mathbf{0} & \mathbf{0} \\ \mathbf{0} & \mathbf{0} \end{bmatrix},$$
  

$$\dot{\mathbf{B}}_{ij} \equiv \begin{bmatrix} \mu_{q(1/\sigma_{\varepsilon}^2)}^{1/2} \mathbf{X}_{ij} & \mu_{q(1/\sigma_{\varepsilon}^2)}^{1/2} \mathbf{Z}_{\text{grp},ij}^g \\ \mathbf{0} & \mathbf{0} \\ \mathbf{0} & \mathbf{0} \\ n_i^{-1/2} \mathbf{M}_{q(\Sigma_g^{-1})}^{1/2} & \mathbf{0} \\ \mathbf{0} & n_i^{-1/2} \mu_{q(1/\sigma_{\text{grp},g}^2)}^{1/2} \mathbf{I}_{K_{\text{grp}}^g} \\ \mathbf{0} & \mathbf{0} \\ \mathbf{0} & \mathbf{0} \end{bmatrix} \quad \text{and} \quad \ddot{\mathbf{B}}_{ij} \equiv \begin{bmatrix} \mu_{q(1/\sigma_{\varepsilon}^2)}^{1/2} \mathbf{X}_{ij} & \mu_{q(1/\sigma_{\varepsilon}^2)}^{1/2} \mathbf{Z}_{\text{grp},ij}^h \\ \mathbf{0} & \mathbf{0} \\ \mathbf{0} & \mathbf{0} \\ \mathbf{0} & \mathbf{0} \\ \mathbf{0} & \mathbf{0} \\ \mathbf{M}_{q(\Sigma_h^{-1})}^{1/2} & \mathbf{0} \\ \mathbf{0} & \mu_{q(1/\sigma_{\text{grp},h}^2)}^{1/2} \mathbf{I}_{K_{\text{grp}}^h} \end{bmatrix}.$$

Result 4 immediately follows from Theorem 4 of Nolan & Wand (2018).

## S.10 Derivation of Algorithm 4

Algorithm 4 relies on expressions for the q-densities for mean field variational Bayesian inference for the parameters in (3.4) with product density restriction (3.5). We have

$$q(\beta, u) \text{ is a } N(\boldsymbol{\mu}_{q(\beta, u)}, \Sigma_{q(\beta, u)}) \text{ density function}$$

where

$$\Sigma_{q(\beta, u)} = (\mathbf{C}^T \mathbf{R}_{\text{MFVB}}^{-1} \mathbf{C} + \mathbf{D}_{\text{MFVB}})^{-1} \quad \text{and} \quad \boldsymbol{\mu}_{q(\beta, u)} = \Sigma_{q(\beta, u)} (\mathbf{C}^T \mathbf{R}_{\text{MFVB}}^{-1} \mathbf{y} + \mathbf{o}_{\text{MFVB}})$$

with  $\mathbf{R}_{\text{MFVB}} \equiv \mu_{\mathbf{q}(1/\sigma_\varepsilon^2)}^{-1} \mathbf{I}$ ,  $\mathbf{o}_{\text{MFVB}} \equiv \begin{bmatrix} \boldsymbol{\Sigma}_\beta^{-1} \boldsymbol{\mu}_\beta \\ \mathbf{0} \end{bmatrix}$  and  $\mathbf{D}_{\text{MFVB}}$  as given in (3.3),

$\mathbf{q}(\sigma_\varepsilon^2)$  is an Inverse- $\chi^2$  ( $\xi_{\mathbf{q}(\sigma_\varepsilon^2)}, \lambda_{\mathbf{q}(\sigma_\varepsilon^2)}$ ) density function

where  $\xi_{\mathbf{q}(\sigma_\varepsilon^2)} = \nu_\varepsilon + \sum_{i=1}^m \sum_{j=1}^{n_i} o_{ij}$  and

$$\lambda_{\mathbf{q}(\sigma_\varepsilon^2)} = \mu_{\mathbf{q}(1/a_\varepsilon)} + \sum_{i=1}^m \sum_{j=1}^{n_i} E_{\mathbf{q}} \left\{ \left\| \mathbf{y}_{ij} - \mathbf{C}_{\text{gbl},ij} \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{gbl}} \end{bmatrix} - \mathbf{C}_{\text{grp},ij}^g \begin{bmatrix} \mathbf{u}_{\text{lin},i}^g \\ \mathbf{u}_{\text{grp},i}^g \end{bmatrix} - \mathbf{C}_{\text{grp},ij}^h \begin{bmatrix} \mathbf{u}_{\text{lin},ij}^h \\ \mathbf{u}_{\text{grp},ij}^h \end{bmatrix} \right\|^2 \right\}$$

& +2\text{tr}\left[C_{\text{grp},ij}^g{}^T C_{\text{gbl},ij} E_q\left\{\left(\begin{bmatrix}\boldsymbol{\beta} \\ \mathbf{u}_{\text{gbl}}\end{bmatrix}-\boldsymbol{\mu}_{q(\boldsymbol{\beta}, \mathbf{u}_{\text{gbl}})}\right)\left(\begin{bmatrix}\mathbf{u}_{\text{lin},i}^g \\ \mathbf{u}_{\text{grp}}^g\end{bmatrix}-\boldsymbol{\mu}_{q(\mathbf{u}_{\text{lin},i}^g, \mathbf{u}_{\text{grp},i}^g)}\right)^T\right\}\right] \\
& +2\text{tr}\left[C_{\text{grp},ij}^h{}^T C_{\text{gbl},ij} E_q\left\{\left(\begin{bmatrix}\boldsymbol{\beta} \\ \mathbf{u}_{\text{gbl}}\end{bmatrix}-\boldsymbol{\mu}_{q(\boldsymbol{\beta}, \mathbf{u}_{\text{gbl}})}\right)\left(\begin{bmatrix}\mathbf{u}_{\text{lin},ij}^h \\ \mathbf{u}_{\text{grp}}^h\end{bmatrix}-\boldsymbol{\mu}_{q(\mathbf{u}_{\text{lin},ij}^h, \mathbf{u}_{\text{grp},ij}^h)}\right)^T\right\}\right] \\
& \left.+2\text{tr}\left[C_{\text{grp},ij}^g{}^T C_{\text{grp},ij}^h E_q\left\{\left(\begin{bmatrix}\mathbf{u}_{\text{lin},i}^g \\ \mathbf{u}_{\text{grp}}^g\end{bmatrix}-\boldsymbol{\mu}_{q(\mathbf{u}_{\text{lin},i}^g, \mathbf{u}_{\text{grp},i}^g)}\right)\left(\begin{bmatrix}\mathbf{u}_{\text{lin},ij}^h \\ \mathbf{u}_{\text{grp}}^h\end{bmatrix}-\boldsymbol{\mu}_{q(\mathbf{u}_{\text{lin},ij}^h, \mathbf{u}_{\text{grp},ij}^h)}\right)^T\right\}\right]\right].
\end{aligned}$$

*Derivation:* The lower bound on the marginal log-likelihood is achieved through the following expression:

$$\begin{aligned}
\log \underline{p}(\mathbf{y}; q) &= E_q\{\log p(\mathbf{y}, \boldsymbol{\beta}, \mathbf{u}, \sigma_\varepsilon^2, a_\varepsilon, \sigma_{\text{gbl}}^2, a_{\text{gbl}}, \sigma_{\text{grp},g}^2, \Sigma_g, a_{\text{grp},g}, \mathbf{A}_{\Sigma_g}, \sigma_{\text{grp},h}^2, \Sigma_h, a_{\text{grp},h}, \mathbf{A}_{\Sigma_h}) \\
&\quad - \log q^*(\boldsymbol{\beta}, \mathbf{u}, \sigma_\varepsilon^2, a_\varepsilon, \sigma_{\text{gbl}}^2, a_{\text{gbl}}, \sigma_{\text{grp},g}^2, \Sigma_g, a_{\text{grp},g}, \mathbf{A}_{\Sigma_g}, \sigma_{\text{grp},h}^2, \Sigma_h, a_{\text{grp},h}, \mathbf{A}_{\Sigma_h})\} \\
&= E_q\{\log p(\mathbf{y} | \boldsymbol{\beta}, \mathbf{u}, \sigma_\varepsilon^2)\} \\
&\quad + E_q\{\log p(\boldsymbol{\beta}, \mathbf{u} | \sigma_{\text{gbl}}^2, \sigma_{\text{grp},g}^2, \Sigma_g, \sigma_{\text{grp},h}^2, \Sigma_h)\} - E_q\{\log q^*(\boldsymbol{\beta}, \mathbf{u})\} \\
&\quad + E_q\{\log p(\sigma_\varepsilon^2 | a_\varepsilon)\} - E_q\{\log q^*(\sigma_\varepsilon^2)\} + E_q\{\log p(a_\varepsilon)\} - E_q\{\log q^*(a_\varepsilon)\} \\
&\quad + E_q\{\log p(\sigma_{\text{gbl}}^2 | a_{\text{gbl}})\} - E_q\{\log q^*(\sigma_{\text{gbl}}^2)\} + E_q\{\log p(a_{\text{gbl}})\} - E_q\{\log q^*(a_{\text{gbl}})\} \\
&\quad + E_q\{\log p(\sigma_{\text{grp},g}^2 | a_{\text{grp},g})\} - E_q\{\log q^*(\sigma_{\text{grp},g}^2)\} + E_q\{\log p(a_{\text{grp},g})\} - E_q\{\log q^*(a_{\text{grp},g})\} \\
&\quad + E_q\{\log p(\Sigma_g | \mathbf{A}_{\Sigma_g})\} - E_q\{\log q^*(\Sigma_g)\} + E_q\{\log p(\mathbf{A}_{\Sigma_g})\} - E_q\{\log q^*(\mathbf{A}_{\Sigma_g})\} \\
&\quad + E_q\{\log p(\sigma_{\text{grp},h}^2 | a_{\text{grp},h})\} - E_q\{\log q^*(\sigma_{\text{grp},h}^2)\} + E_q\{\log p(a_{\text{grp},h})\} - E_q\{\log q^*(a_{\text{grp},h})\} \\
&\quad + E_q\{\log p(\Sigma_h | \mathbf{A}_{\Sigma_h})\} - E_q\{\log q^*(\Sigma_h)\} + E_q\{\log p(\mathbf{A}_{\Sigma_h})\} - E_q\{\log q^*(\mathbf{A}_{\Sigma_h})\}.
\end{aligned} \tag{S.4}$$

First we note that

$$\log p(\mathbf{y} | \boldsymbol{\beta}, \mathbf{u}, \sigma_\varepsilon^2) = -\frac{1}{2}\log(2\pi)\sum_{i=1}^m\sum_{j=1}^{n_i}o_{ij} - \frac{1}{2}\log(\sigma_\varepsilon^2)\sum_{i=1}^m\sum_{j=1}^{n_i}o_{ij} - \frac{1}{2\sigma_\varepsilon^2}\|\mathbf{y} - \mathbf{X}\boldsymbol{\beta} - \mathbf{Z}\mathbf{u}\|^2$$

where

$$\begin{aligned}
& \|\mathbf{y} - \mathbf{X}\boldsymbol{\beta} - \mathbf{Z}\mathbf{u}\|^2 \\
& = \sum_{i=1}^m\sum_{j=1}^{n_i}\|\mathbf{y}_{ij} - \mathbf{X}_{ij}\boldsymbol{\beta} - \mathbf{Z}_{\text{gbl},ij}\mathbf{u}_{\text{gbl},i} - \mathbf{X}_{ij}\mathbf{u}_{\text{lin},i}^g - \mathbf{Z}_{\text{grp},ij}^g\mathbf{u}_{\text{grp},i}^g - \mathbf{X}_{ij}\mathbf{u}_{\text{lin},ij}^h - \mathbf{Z}_{\text{grp},ij}^h\mathbf{u}_{\text{grp},ij}^h\|^2 \\
& = \sum_{i=1}^m\sum_{j=1}^{n_i}\left\|\mathbf{y}_{ij} - C_{\text{gbl},ij}\begin{bmatrix}\boldsymbol{\beta} \\ \mathbf{u}_{\text{gbl},i}\end{bmatrix} - C_{\text{grp},ij}^g\begin{bmatrix}\mathbf{u}_{\text{lin},i}^g \\ \mathbf{u}_{\text{grp},i}^g\end{bmatrix} - C_{\text{grp},ij}^h\begin{bmatrix}\mathbf{u}_{\text{lin},ij}^h \\ \mathbf{u}_{\text{grp},ij}^h\end{bmatrix}\right\|^2
\end{aligned}$$

and

$$C_{\text{gbl},ij} \equiv [\mathbf{X}_{ij} \mathbf{Z}_{\text{gbl},ij}], \quad C_{\text{grp},ij}^g \equiv [\mathbf{X}_{ij} \mathbf{Z}_{\text{grp},ij}^g], \quad C_{\text{grp},ij}^h \equiv [\mathbf{X}_{ij} \mathbf{Z}_{\text{grp},ij}^h].$$

Therefore,

$$\begin{aligned}
E_{\mathbf{q}}\{\log \mathbf{p}(\mathbf{y} | \boldsymbol{\beta}, \mathbf{u}, \sigma_{\varepsilon}^2)\} &= -\frac{1}{2} \log(2\pi) \sum_{i=1}^m \sum_{j=1}^{n_i} o_{ij} - \frac{1}{2} E_{\mathbf{q}}\{\log(\sigma_{\varepsilon}^2)\} \sum_{i=1}^m \sum_{j=1}^{n_i} o_{ij} \\
&\quad - \frac{1}{2} \mu_{\mathbf{q}(1/\sigma_{\varepsilon}^2)} \sum_{i=1}^m \sum_{j=1}^{n_i} \left\{ \left\| E_{\mathbf{q}} \left( \mathbf{y}_{ij} - \mathbf{C}_{\text{glob},ij} \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{glob},i} \end{bmatrix} - \mathbf{C}_{\text{grp},ij}^g \begin{bmatrix} \mathbf{u}_{\text{lin},i}^g \\ \mathbf{u}_{\text{grp},i}^g \end{bmatrix} - \mathbf{C}_{\text{grp},ij}^h \begin{bmatrix} \mathbf{u}_{\text{lin},ij}^h \\ \mathbf{u}_{\text{grp},ij}^h \end{bmatrix} \right) \right\|^2 \right. \\
&\quad + \text{tr} \left( \mathbf{C}_{\text{glob},ij}^T \mathbf{C}_{\text{glob},ij} \boldsymbol{\Sigma}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u}_{\text{glob}})} \right) + \text{tr} \left( \mathbf{C}_{\text{grp},ij}^g {}^T \mathbf{C}_{\text{grp},ij}^g \boldsymbol{\Sigma}_{\mathbf{q}(\mathbf{u}_{\text{lin},i}^g, \mathbf{u}_{\text{grp},i}^g)} \right) \\
&\quad + \text{tr} \left( \mathbf{C}_{\text{grp},ij}^h {}^T \mathbf{C}_{\text{grp},ij}^h \boldsymbol{\Sigma}_{\mathbf{q}(\mathbf{u}_{\text{lin},ij}^h, \mathbf{u}_{\text{grp},ij}^h)} \right) \\
&\quad + 2 \text{tr} \left[ \mathbf{C}_{\text{grp},ij}^g {}^T \mathbf{C}_{\text{glob},ij} E_{\mathbf{q}} \left\{ \left( \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{glob}} \end{bmatrix} - \boldsymbol{\mu}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u}_{\text{glob}})} \right) \left( \begin{bmatrix} \mathbf{u}_{\text{lin},i}^g \\ \mathbf{u}_{\text{grp}}^g \end{bmatrix} - \boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},i}^g, \mathbf{u}_{\text{grp},i}^g)} \right)^T \right\} \right] \\
&\quad + 2 \text{tr} \left[ \mathbf{C}_{\text{grp},ij}^h {}^T \mathbf{C}_{\text{glob},ij} E_{\mathbf{q}} \left\{ \left( \begin{bmatrix} \boldsymbol{\beta} \\ \mathbf{u}_{\text{glob}} \end{bmatrix} - \boldsymbol{\mu}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u}_{\text{glob}})} \right) \left( \begin{bmatrix} \mathbf{u}_{\text{lin},ij}^h \\ \mathbf{u}_{\text{grp}}^h \end{bmatrix} - \boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},ij}^h, \mathbf{u}_{\text{grp},ij}^h)} \right)^T \right\} \right] \\
&\quad + 2 \text{tr} \left[ \mathbf{C}_{\text{grp},ij}^g {}^T \mathbf{C}_{\text{grp},ij}^h E_{\mathbf{q}} \left\{ \left( \begin{bmatrix} \mathbf{u}_{\text{lin},i}^g \\ \mathbf{u}_{\text{grp}}^g \end{bmatrix} - \boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},i}^g, \mathbf{u}_{\text{grp},i}^g)} \right) \left( \begin{bmatrix} \mathbf{u}_{\text{lin},ij}^h \\ \mathbf{u}_{\text{grp}}^h \end{bmatrix} - \boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},ij}^h, \mathbf{u}_{\text{grp},ij}^h)} \right)^T \right\} \right] \}
\end{aligned}$$

The remainder of the expectations in (S.4) are expressed as:

$$\begin{aligned}
E_{\mathbf{q}}\{\log \mathbf{p}(\boldsymbol{\beta}, \mathbf{u} | \sigma_{\text{glob}}^2, \sigma_{\text{grp},g}^2, \boldsymbol{\Sigma}_g, \sigma_{\text{grp},h}^2, \boldsymbol{\Sigma}_h)\} &= -\frac{1}{2} \{2 + K_{\text{glob}} + m(2 + K_{\text{grp}}^g) + (2 + K_{\text{grp}}^h) \sum_{i=1}^m n_i\} \log(2\pi) - \frac{1}{2} \log |\boldsymbol{\Sigma}_{\boldsymbol{\beta}}| - \frac{1}{2} K_{\text{glob}} E_{\mathbf{q}}\{\log(\sigma_{\text{glob}}^2)\} \\
&\quad - \frac{1}{2} m (E_{\mathbf{q}}\{\log |\boldsymbol{\Sigma}_g|\} - K_{\text{grp}}^g E_{\mathbf{q}}\{\log(\sigma_{\text{grp},g}^2)\}) - \frac{1}{2} (E_{\mathbf{q}}\{\log |\boldsymbol{\Sigma}_h|\} - K_{\text{grp}}^h E_{\mathbf{q}}\{\log(\sigma_{\text{grp},h}^2)\}) \sum_{i=1}^m n_i \\
&\quad - \frac{1}{2} \mu_{\mathbf{q}(1/\sigma_{\text{glob}}^2)} \left\{ \|\boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{glob}})}\|^2 + \text{tr}(\boldsymbol{\Sigma}_{\mathbf{q}(\mathbf{u}_{\text{glob}})}) \right\} - \frac{1}{2} \mu_{\mathbf{q}(1/\sigma_{\text{grp},g}^2)} \sum_{i=1}^m \left\{ \|\boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{grp},i}^g)}\|^2 + \text{tr}(\boldsymbol{\Sigma}_{\mathbf{q}(\mathbf{u}_{\text{grp},i}^g)}) \right\} \\
&\quad - \frac{1}{2} \mu_{\mathbf{q}(1/\sigma_{\text{grp},h}^2)} \sum_{i=1}^m \sum_{j=1}^{n_i} \left\{ \|\boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{grp},ij}^h)}\|^2 + \text{tr}(\boldsymbol{\Sigma}_{\mathbf{q}(\mathbf{u}_{\text{grp},ij}^h)}) \right\} \\
&\quad - \frac{1}{2} \text{tr} \left( \boldsymbol{\Sigma}_{\boldsymbol{\beta}}^{-1} \left\{ (\boldsymbol{\mu}_{\mathbf{q}(\boldsymbol{\beta})} - \boldsymbol{\mu}_{\boldsymbol{\beta}}) (\boldsymbol{\mu}_{\mathbf{q}(\boldsymbol{\beta})} - \boldsymbol{\mu}_{\boldsymbol{\beta}})^T + \boldsymbol{\Sigma}_{\mathbf{q}(\boldsymbol{\beta})} \right\} \right) \\
&\quad - \frac{1}{2} \text{tr} \left( \mathbf{M}_{\mathbf{q}(\boldsymbol{\Sigma}_g^{-1})} \left\{ \sum_{i=1}^m \left( \boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},i}^g)} \boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},i}^g)}^T + \boldsymbol{\Sigma}_{\mathbf{q}(\mathbf{u}_{\text{lin},i}^g)} \right) \right\} \right) \\
&\quad - \frac{1}{2} \text{tr} \left( \mathbf{M}_{\mathbf{q}(\boldsymbol{\Sigma}_h^{-1})} \left\{ \sum_{i=1}^m \sum_{j=1}^{n_i} \left( \boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},ij}^h)} \boldsymbol{\mu}_{\mathbf{q}(\mathbf{u}_{\text{lin},ij}^h)}^T + \boldsymbol{\Sigma}_{\mathbf{q}(\mathbf{u}_{\text{lin},ij}^h)} \right) \right\} \right), \\
E_{\mathbf{q}}\{\log \mathbf{q}^*(\boldsymbol{\beta}, \mathbf{u})\} &= -\frac{1}{2} \left\{ 2 + K_{\text{glob}} + m(2 + K_{\text{grp}}^g) + (2 + K_{\text{grp}}^h) \sum_{i=1}^m n_i \right\} \{1 + \log(2\pi)\} \\
&\quad - \frac{1}{2} \log |\boldsymbol{\Sigma}_{\mathbf{q}(\boldsymbol{\beta}, \mathbf{u})}|,
\end{aligned}$$

Expressions for  $E_{\mathbf{q}}\{\log \mathbf{p}(\sigma_{\varepsilon}^2 | a_{\varepsilon})\}$ ,  $E_{\mathbf{q}}\{\log \mathbf{q}^*(\sigma_{\varepsilon}^2)\}$ ,  $E_{\mathbf{q}}\{\log \mathbf{p}(a_{\varepsilon})\}$ ,  $E_{\mathbf{q}}\{\log \mathbf{q}^*(a_{\varepsilon})\}$ ,  $E_{\mathbf{q}}\{\log \mathbf{p}(\sigma_{\text{glob}}^2 | a_{\text{glob}})\}$ ,  $E_{\mathbf{q}}\{\log \mathbf{q}^*(\sigma_{\text{glob}}^2)\}$ ,  $E_{\mathbf{q}}\{\log \mathbf{p}(a_{\text{glob}})\}$  and  $E_{\mathbf{q}}\{\log \mathbf{q}^*(a_{\text{glob}})\}$  follow the same form as shown from the derivations in the two-level case.

Following on, we have

$$\begin{aligned}
E_{\mathbf{q}}\{\log \mathbf{p}(\sigma_{\text{grp},g}^2 | a_{\text{grp},g})\} &= -\frac{1}{2} \nu_{\text{grp},g} E_{\mathbf{q}}\{\log(2a_{\text{grp},g})\} - \log \Gamma(\nu_{\text{grp},g}/2) - (\frac{1}{2} \nu_{\text{grp},g} + 1) E_{\mathbf{q}}\{\log(\sigma_{\text{grp},g}^2)\} \\
&\quad - \frac{1}{2} \mu_{\mathbf{q}(1/a_{\text{grp},g})} \mu_{\mathbf{q}(1/\sigma_{\text{grp},g}^2)},
\end{aligned}$$

$$\begin{aligned}
E_{\mathbf{q}}\{\log \mathbf{q}^*(\sigma_{\text{grp},g}^2)\} &= \frac{1}{2}\xi_{\mathbf{q}(\sigma_{\text{grp},g}^2)} \log(\lambda_{\mathbf{q}(\sigma_{\text{grp},g}^2)}/2) - \log\{\Gamma(\frac{1}{2}\xi_{\mathbf{q}(\sigma_{\text{grp},g}^2)})\} - (\frac{1}{2}\xi_{\mathbf{q}(\sigma_{\text{grp},g}^2)} + 1)E_{\mathbf{q}}\{\log(\sigma_{\text{grp},g}^2)\} \\
&\quad - \frac{1}{2}\lambda_{\mathbf{q}(\sigma_{\text{grp},g}^2)}\mu_{\mathbf{q}(1/\sigma_{\text{grp},g}^2)}, \\
E_{\mathbf{q}}\{\log \mathbf{p}(a_{\text{grp},g})\} &= -\frac{1}{2}\log(2\nu_{\text{grp},g}s_{\text{grp},g}^2) - \log\{\Gamma(\frac{1}{2})\} - (\frac{1}{2} + 1)E_{\mathbf{q}}\{\log(a_{\text{grp},g})\} \\
&\quad - \{1/(2\nu_{\text{grp},g}s_{\text{grp},g}^2)\}\mu_{\mathbf{q}(1/a_{\text{grp},g})}, \\
E_{\mathbf{q}}\{\log \mathbf{q}^*(a_{\text{grp},g})\} &= \frac{1}{2}\xi_{\mathbf{q}(a_{\text{grp},g})} \log(\lambda_{\mathbf{q}(a_{\text{grp},g})}/2) - \log\{\Gamma(\frac{1}{2}\xi_{\mathbf{q}(a_{\text{grp},g})})\} - (\frac{1}{2}\xi_{\mathbf{q}(a_{\text{grp},g})} + 1)E_{\mathbf{q}}\{\log(a_{\text{grp},g})\} \\
&\quad - \frac{1}{2}\lambda_{\mathbf{q}(a_{\text{grp},g})}\mu_{\mathbf{q}(1/a_{\text{grp},g})}, \\
E_{\mathbf{q}}[\log\{\mathbf{p}(\boldsymbol{\Sigma}_g|\boldsymbol{A}_{\boldsymbol{\Sigma}_g})\}] &= -\frac{1}{2}(\nu_{\boldsymbol{\Sigma}_g} + 1)E_{\mathbf{q}}\{\log|\boldsymbol{A}_{\boldsymbol{\Sigma}_g}|\} - \frac{1}{2}(\nu_{\boldsymbol{\Sigma}_g} + 4)E_{\mathbf{q}}\{\log|\boldsymbol{\Sigma}_g|\} - \frac{1}{2}\log(\pi) \\
&\quad - \frac{1}{2}\text{tr}(\boldsymbol{M}_{\mathbf{q}(\boldsymbol{A}_{\boldsymbol{\Sigma}_g}^{-1})}\boldsymbol{M}_{\mathbf{q}(\boldsymbol{\Sigma}_g^{-1})}) - (\nu_{\boldsymbol{\Sigma}_g} + 3)\log(2) - \sum_{j=1}^2 \log\Gamma(\frac{1}{2}(\nu_{\boldsymbol{\Sigma}_g} + 4 - j)), \\
E_{\mathbf{q}}[\log\{\mathbf{q}^*(\boldsymbol{\Sigma}_g)\}] &= \frac{1}{2}(\xi_{\mathbf{q}(\boldsymbol{\Sigma}_g)} - 1)\log|\boldsymbol{\Lambda}_{\mathbf{q}(\boldsymbol{\Sigma}_g)}| - \frac{1}{2}(\xi_{\mathbf{q}(\boldsymbol{\Sigma}_g)} + 2)E_{\mathbf{q}}\{\log|\boldsymbol{\Sigma}_g|\} - \frac{1}{2}\text{tr}(\boldsymbol{\Lambda}_{\mathbf{q}(\boldsymbol{\Sigma}_g)}\boldsymbol{M}_{\mathbf{q}(\boldsymbol{\Sigma}_g^{-1})}) \\
&\quad - (\xi_{\mathbf{q}(\boldsymbol{\Sigma}_g)} + 1)\log(2) - \frac{1}{2}\log(\pi) - \sum_{j=1}^2 \log\Gamma(\frac{1}{2}(\xi_{\mathbf{q}(\boldsymbol{\Sigma}_g)} + 2 - j)), \\
E_{\mathbf{q}}[\log\{\mathbf{p}(\boldsymbol{A}_{\boldsymbol{\Sigma}_g})\}] &= -\frac{3}{2}E_{\mathbf{q}}\{\log|\boldsymbol{A}_{\boldsymbol{\Sigma}_g}|\} - \frac{1}{2}\sum_{j=1}^2 1/(\nu_{\boldsymbol{\Sigma}_g}s_{\boldsymbol{\Sigma}_g,j}^2) \left(\boldsymbol{M}_{\mathbf{q}(\boldsymbol{A}_{\boldsymbol{\Sigma}_g}^{-1})}\right)_{jj} - 2\log(2) \\
&\quad - \frac{1}{2}\log(\pi) - \sum_{j=1}^2 \log\Gamma(\frac{1}{2}(3 - j)),
\end{aligned}$$

and

$$\begin{aligned}
E_{\mathbf{q}}[\log\{\mathbf{q}^*(\boldsymbol{A}_{\boldsymbol{\Sigma}_g})\}] &= \frac{1}{2}(\xi_{\mathbf{q}(\boldsymbol{A}_{\boldsymbol{\Sigma}_g})} - 1)\log|\boldsymbol{\Lambda}_{\mathbf{q}(\boldsymbol{A}_{\boldsymbol{\Sigma}_g})}| - \frac{1}{2}(\xi_{\mathbf{q}(\boldsymbol{A}_{\boldsymbol{\Sigma}_g})} + 2)E_{\mathbf{q}}\{\log|\boldsymbol{A}_{\boldsymbol{\Sigma}_g}|\} \\
&\quad - \frac{1}{2}\text{tr}(\boldsymbol{\Lambda}_{\mathbf{q}(\boldsymbol{A}_{\boldsymbol{\Sigma}_g})}\boldsymbol{M}_{\mathbf{q}(\boldsymbol{A}_{\boldsymbol{\Sigma}_g}^{-1})}) - (\xi_{\mathbf{q}(\boldsymbol{A}_{\boldsymbol{\Sigma}_g})} + 1)\log(2) - \frac{1}{2}\log(\pi) \\
&\quad - \sum_{j=1}^2 \log\Gamma(\frac{1}{2}(\xi_{\mathbf{q}(\boldsymbol{A}_{\boldsymbol{\Sigma}_g})} + 2 - j)).
\end{aligned}$$

In addition, the expressions for  $E_{\mathbf{q}}\{\log \mathbf{p}(\sigma_{\text{grp},h}^2 | a_{\text{grp},h})\}$ ,  $E_{\mathbf{q}}\{\log \mathbf{q}^*(\sigma_{\text{grp},h}^2)\}$ ,  $E_{\mathbf{q}}\{\log \mathbf{p}(a_{\text{grp},h})\}$ ,  $E_{\mathbf{q}}\{\log \mathbf{q}^*(a_{\text{grp},h})\}$ ,  $E_{\mathbf{q}}[\log\{\mathbf{p}(\boldsymbol{\Sigma}_h|\boldsymbol{A}_{\boldsymbol{\Sigma}_h})\}]$ ,  $E_{\mathbf{q}}[\log\{\mathbf{q}(\boldsymbol{\Sigma}_h)\}]$ ,  $E_{\mathbf{q}}[\log\{\mathbf{p}(\boldsymbol{A}_{\boldsymbol{\Sigma}_h})\}]$ ,  $E_{\mathbf{q}}[\log\{\mathbf{q}(\boldsymbol{A}_{\boldsymbol{\Sigma}_h})\}]$ , are similar to the ones shown above.

In the summation of each of these  $\log \underline{\mathbf{p}}(\mathbf{y}; \mathbf{q})$  terms, note that the coefficient of  $E_{\mathbf{q}}\{\log(\sigma_{\varepsilon}^2)\}$  is

$$-\frac{1}{2}\sum_{i=1}^m \sum_{j=1}^{n_i} o_{ij} - \frac{1}{2}\nu_{\varepsilon} - 1 + \frac{1}{2}\xi_{\mathbf{q}(\sigma_{\varepsilon}^2)} + 1 = -\frac{1}{2}\sum_{i=1}^m \sum_{j=1}^{n_i} o_{ij} - \frac{1}{2}\nu_{\varepsilon} - 1 + \frac{1}{2}(\nu_{\varepsilon} + \sum_{i=1}^m \sum_{j=1}^{n_i} o_{ij}) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log(\sigma_{\text{glob}}^2)\}$  is

$$-\frac{1}{2}K_{\text{glob}} - \frac{1}{2}\nu_{\text{glob}} - 1 + \frac{1}{2}\xi_{\mathbf{q}(\sigma_{\text{glob}}^2)} + 1 = -\frac{1}{2}K_{\text{glob}} - \frac{1}{2}\nu_{\text{glob}} - 1 + \frac{1}{2}(\nu_{\text{glob}} + K_{\text{glob}}) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log(\sigma_{\text{grp},g}^2)\}$  is

$$-\frac{1}{2}mK_{\text{grp}}^g - \frac{1}{2}\nu_{\text{grp},g} - 1 + \frac{1}{2}\xi_{\mathbf{q}(\sigma_{\text{grp},g}^2)} + 1 = -\frac{1}{2}mK_{\text{grp}}^g - \frac{1}{2}\nu_{\text{grp},g} - 1 + \frac{1}{2}(\nu_{\text{grp},g} + mK_{\text{grp}}^g) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log(\sigma_{\text{grp},h}^2)\}$  is

$$-\frac{1}{2}K_{\text{grp}}^h \sum_{i=1}^m n_i - \frac{1}{2}\nu_{\text{grp},h} - 1 + \frac{1}{2}\xi_{\mathbf{q}(\sigma_{\text{grp},h}^2)} + 1 = -\frac{1}{2}K_{\text{grp}}^h \sum_{i=1}^m n_i - \frac{1}{2}\nu_{\text{grp},h} - 1 + \frac{1}{2}\left(\nu_{\text{grp},h} + K_{\text{grp}}^h \sum_{i=1}^m n_i\right) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log|\boldsymbol{\Sigma}_g|\}$  is

$$-\frac{m}{2} - \frac{1}{2}(\nu_{\boldsymbol{\Sigma}_g} + 4) + \frac{1}{2}(\xi_{\mathbf{q}(\boldsymbol{\Sigma}_g)} + 2) = -\frac{1}{2}(m + \nu_{\boldsymbol{\Sigma}_g} + 4) + \frac{1}{2}(m + \nu_{\boldsymbol{\Sigma}_g} + 4) = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log|\boldsymbol{\Sigma}_h|\}$  is

$$-\frac{1}{2}\sum_{i=1}^m n_i - \frac{1}{2}(\nu_{\boldsymbol{\Sigma}_h} + 4) + \frac{1}{2}(\xi_{\mathbf{q}(\boldsymbol{\Sigma}_h)} + 2) = -\frac{1}{2}\left(\sum_{i=1}^m n_i + \nu_{\boldsymbol{\Sigma}_h} + 4\right) + \frac{1}{2}\left(\sum_{i=1}^m n_i + \nu_{\boldsymbol{\Sigma}_h} + 4\right) = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log(a_{\varepsilon})\}$  is

$$-\frac{1}{2}\nu_{\varepsilon} - \frac{1}{2} - 1 + \frac{1}{2}\xi_{\mathbf{q}(a_{\varepsilon})} + 1 = -\frac{1}{2}\nu_{\varepsilon} - \frac{1}{2} - 1 + \frac{1}{2}(\nu_{\varepsilon} + 1) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log(a_{\text{gbl}})\}$  is

$$-\frac{1}{2}\nu_{\text{gbl}} - \frac{1}{2} - 1 + \frac{1}{2}\xi_{\mathbf{q}(a_{\text{gbl}})} + 1 = -\frac{1}{2}\nu_{\text{gbl}} - \frac{1}{2} - 1 + \frac{1}{2}(\nu_{\text{gbl}} + 1) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log(a_{\text{grp}, g})\}$  is

The coefficient of  $E_{\mathbf{q}}\{\log(a_{\text{grp}, h})\}$  is

$$-\frac{1}{2}\nu_{\text{grp}, h} - \frac{1}{2} - 1 + \frac{1}{2}\xi_{\mathbf{q}(a_{\text{grp}, h})} + 1 = -\frac{1}{2}\nu_{\text{grp}, h} - \frac{1}{2} - 1 + \frac{1}{2}(\nu_{\text{grp}, h} + 1) + 1 = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log|\mathbf{A}_{\Sigma_g}|\}$  is

$$-\frac{1}{2}(\nu_{\Sigma_g} + 1) - \frac{3}{2} + \frac{1}{2}(\xi_{\mathbf{q}(\mathbf{A}_{\Sigma_g})} + 2) = -\frac{1}{2}(\nu_{\Sigma_g} + 2) + \frac{1}{2}(\nu_{\Sigma_g} + 2) = 0.$$

The coefficient of  $E_{\mathbf{q}}\{\log|\mathbf{A}_{\Sigma_h}|\}$  is

$$-\frac{1}{2}(\nu_{\Sigma_h} + 1) - \frac{3}{2} + \frac{1}{2}(\xi_{\mathbf{q}(\mathbf{A}_{\Sigma_h})} + 2) = -\frac{1}{2}(\nu_{\Sigma_h} + 2) + \frac{1}{2}(\nu_{\Sigma_h} + 2) = 0.$$

Therefore these terms can be dropped and the cancellations led by the above expectations lead to the lower bound expression in (S.3).

## S.12 The SOLVETWOLEVELSPARSELEASTSQUARES Algorithm

The SOLVETWOLEVELSPARSELEASTSQUARES is listed in Nolan *et al.* (2018) and based on Theorem 2 of Nolan & Wand (2018). Given its centrality to Algorithms 1 and 2 we list it again here. The algorithm solves a sparse version of the the least squares problem:

$$\min_{\mathbf{x}} \|\mathbf{b} - \mathbf{Bx}\|^2$$

which has solution  $\mathbf{x} = \mathbf{A}^{-1}\mathbf{B}^T\mathbf{b}$  where  $\mathbf{A} = \mathbf{B}^T\mathbf{B}$  where  $\mathbf{B}$  and  $\mathbf{b}$  have the following structure:

$$\mathbf{B} \equiv \left[ \begin{array}{c|c|c|c|c} \mathbf{B}_1 & \dot{\mathbf{B}}_1 & \mathbf{O} & \cdots & \mathbf{O} \\ \hline \mathbf{B}_2 & \mathbf{O} & \dot{\mathbf{B}}_2 & \cdots & \mathbf{O} \\ \hline \vdots & \vdots & \vdots & \ddots & \vdots \\ \hline \mathbf{B}_m & \mathbf{O} & \mathbf{O} & \cdots & \dot{\mathbf{B}}_m \end{array} \right] \quad \text{and} \quad \mathbf{b} = \left[ \begin{array}{c} \mathbf{b}_1 \\ \hline \mathbf{b}_2 \\ \vdots \\ \hline \mathbf{b}_m \end{array} \right]. \quad (\text{S.5})$$

The sub-matrices corresponding to the non-zero blocks of  $\mathbf{x}$  and  $\mathbf{A}$  are labelled according to:

$$\mathbf{x} \equiv \left[ \begin{array}{c} \mathbf{x}_1 \\ \hline \mathbf{x}_{2,1} \\ \hline \mathbf{x}_{2,2} \\ \vdots \\ \hline \mathbf{x}_{2,m} \end{array} \right] \quad \text{and} \quad \mathbf{A}^{-1} = \left[ \begin{array}{c|c|c|c|c} \mathbf{A}^{11} & \mathbf{A}^{12,1} & \mathbf{A}^{12,2} & \cdots & \mathbf{A}^{12,m} \\ \hline \mathbf{A}^{12,1T} & \mathbf{A}^{22,1} & \times & \cdots & \times \\ \hline \mathbf{A}^{12,2T} & \times & \mathbf{A}^{22,2} & \cdots & \times \\ \hline \vdots & \vdots & \vdots & \ddots & \vdots \\ \hline \mathbf{A}^{12,mT} & \times & \times & \cdots & \mathbf{A}^{22,m} \end{array} \right] \quad (\text{S.6})$$

with  $\times$  denoting sub-blocks that are not of interest. The SOLVETWOLEVELSPARSELEASTSQUARES algorithm is given in Algorithm S.1.

---

**Algorithm S.1** SOLVETWOLEVELSPARSELEASTSQUARES for solving the two-level sparse matrix least squares problem: minimise  $\|\mathbf{b} - \mathbf{B}\mathbf{x}\|^2$  in  $\mathbf{x}$  and sub-blocks of  $\mathbf{A}^{-1}$  corresponding to the non-zero sub-blocks of  $\mathbf{A} = \mathbf{B}^T\mathbf{B}$ . The sub-block notation is given by (S.5) and (S.6).

---

Inputs:  $\{\dot{\mathbf{b}}_i(\tilde{n}_i \times 1), \mathbf{B}_i(\tilde{n}_i \times p), \dot{\mathbf{B}}_i(\tilde{n}_i \times q)\} : 1 \leq i \leq m\}$

$\omega_3 \leftarrow \text{NULL} ; \Omega_4 \leftarrow \text{NULL}$

For  $i = 1, \dots, m$ :

Decompose  $\dot{\mathbf{B}}_i = \mathbf{Q}_i \begin{bmatrix} \mathbf{R}_i \\ \mathbf{0} \end{bmatrix}$  such that  $\mathbf{Q}_i^{-1} = \mathbf{Q}_i^T$  and  $\mathbf{R}_i$  is upper-triangular.

$\mathbf{c}_{0i} \leftarrow \mathbf{Q}_i^T \dot{\mathbf{b}}_i ; \mathbf{C}_{0i} \leftarrow \mathbf{Q}_i^T \mathbf{B}_i$

$\mathbf{c}_{1i} \leftarrow \text{first } q \text{ rows of } \mathbf{c}_{0i} ; \mathbf{c}_{2i} \leftarrow \text{remaining rows of } \mathbf{c}_{0i} ; \omega_3 \leftarrow \begin{bmatrix} \omega_3 \\ \mathbf{c}_{2i} \end{bmatrix}$

$\mathbf{C}_{1i} \leftarrow \text{first } q \text{ rows of } \mathbf{C}_{0i} ; \mathbf{C}_{2i} \leftarrow \text{remaining rows of } \mathbf{C}_{0i} ; \Omega_4 \leftarrow \begin{bmatrix} \Omega_4 \\ \mathbf{C}_{2i} \end{bmatrix}$

Decompose  $\Omega_4 = \mathbf{Q} \begin{bmatrix} \mathbf{R} \\ \mathbf{0} \end{bmatrix}$  such that  $\mathbf{Q}^{-1} = \mathbf{Q}^T$  and  $\mathbf{R}$  is upper-triangular.

$\mathbf{c} \leftarrow \text{first } p \text{ rows of } \mathbf{Q}^T \omega_3 ; \mathbf{x}_1 \leftarrow \mathbf{R}^{-1} \mathbf{c} ; \mathbf{A}^{11} \leftarrow \mathbf{R}^{-1} \mathbf{R}^{-T}$

For  $i = 1, \dots, m$ :

$\mathbf{x}_{2,i} \leftarrow \mathbf{R}_i^{-1} (\mathbf{c}_{1i} - \mathbf{C}_{1i} \mathbf{x}_1) ; \mathbf{A}^{12,i} \leftarrow -\mathbf{A}^{11} (\mathbf{R}_i^{-1} \mathbf{C}_{1i})^T$

$\mathbf{A}^{22,i} \leftarrow \mathbf{R}_i^{-1} (\mathbf{R}_i^{-T} - \mathbf{C}_{1i} \mathbf{A}^{12,i})$

Output:  $(\mathbf{x}_1, \mathbf{A}^{11}, \{(\mathbf{x}_{2,i}, \mathbf{A}^{22,i}, \mathbf{A}^{12,i}) : 1 \leq i \leq m\})$

---

### S.13 The SOLVETHREELEVELSPARSELEASTSQUARES Algorithm

The SOLVETHREELEVELSPARSELEASTSQUARES, listed in Nolan *et al.* (2018) is a proceduralization of Theorem 4 of Nolan & Wand (2018). Since it is central to Algorithms 3 and 4 we list it here. The SOLVETHREELEVELSPARSELEASTSQUARES algorithm is concerned with solving the sparse three-level version of

$$\min_{\mathbf{x}} \|\mathbf{b} - \mathbf{B}\mathbf{x}\|^2$$

with the solution  $\mathbf{x} = \mathbf{A}^{-1}\mathbf{B}^T\mathbf{b}$  where  $\mathbf{A} = \mathbf{B}^T\mathbf{B}$  where  $\mathbf{B}$  and  $\mathbf{b}$  have the following structure:

$$\mathbf{B} \equiv \left[ \begin{array}{c|c} \text{stack} \left\{ \text{stack}_{1 \leq j \leq n_i} (\mathbf{B}_{ij}) \right\} & \text{blockdiag}_{1 \leq i \leq m} \left\{ \left[ \begin{array}{c|c} \text{stack}_{1 \leq j \leq n_i} (\dot{\mathbf{B}}_{ij}) & \text{blockdiag}_{1 \leq j \leq n_i} (\ddot{\mathbf{B}}_{ij}) \end{array} \right] \right\} \end{array} \right] \quad (\text{S.7})$$

and

$$\mathbf{b} \equiv \text{stack}_{1 \leq i \leq m} \left\{ \text{stack}_{1 \leq j \leq n_i} (\mathbf{b}_{ij}) \right\}. \quad (\text{S.8})$$

The three-level sparse matrix inverse problem involves determination of all sub-blocks of  $\mathbf{x}$  and the sub-blocks of  $\mathbf{A}^{-1}$  corresponding to the non-zero sub-blocks of  $\mathbf{A}$ . Our notation for these sub-blocks is illustrated by

$$\mathbf{x} = \begin{bmatrix} \mathbf{x}_1 \\ \hline \mathbf{x}_{2,1} \\ \hline \mathbf{x}_{2,11} \\ \hline \mathbf{x}_{2,12} \\ \hline \mathbf{x}_{2,2} \\ \hline \mathbf{x}_{2,21} \\ \hline \mathbf{x}_{2,22} \\ \hline \mathbf{x}_{2,23} \end{bmatrix} \quad (\text{S.9})$$

and  $\mathbf{A}^{-1} =$

$$\left[ \begin{array}{ccccccccc} \mathbf{A}^{11} & \mathbf{A}^{12,1} & \mathbf{A}^{12,11} & \mathbf{A}^{12,12} & \mathbf{A}^{12,2} & \mathbf{A}^{12,21} & \mathbf{A}^{12,22} & \mathbf{A}^{12,23} \\ \hline \mathbf{A}^{12,1T} & \mathbf{A}^{22,1} & \mathbf{A}^{12,1,1} & \mathbf{A}^{12,1,2} & \times & \times & \times & \times \\ \hline \mathbf{A}^{12,11T} & \mathbf{A}^{12,1,1T} & \mathbf{A}^{22,11} & \times & \times & \times & \times & \times \\ \hline \mathbf{A}^{12,12T} & \mathbf{A}^{12,1,2T} & \times & \mathbf{A}^{22,12} & \times & \times & \times & \times \\ \hline \mathbf{A}^{12,2T} & \times & \times & \times & \mathbf{A}^{22,2} & \mathbf{A}^{12,2,1} & \mathbf{A}^{12,2,2} & \mathbf{A}^{12,2,3} \\ \hline \mathbf{A}^{12,21T} & \times & \times & \times & \mathbf{A}^{12,2,1T} & \mathbf{A}^{22,21} & \times & \times \\ \hline \mathbf{A}^{12,22T} & \times & \times & \times & \mathbf{A}^{12,2,2T} & \times & \mathbf{A}^{22,22} & \times \\ \hline \mathbf{A}^{12,23T} & \times & \times & \times & \mathbf{A}^{12,2,3T} & \times & \times & \mathbf{A}^{22,23} \end{array} \right]$$

for the  $m = 2$ ,  $n_1 = 2$  and  $n_2 = 3$  case. The  $\times$  symbol denotes sub-blocks that are not of interest. The SOLVETHREELEVELSPARSELEASTSQUARES algorithm is given in Algorithm S.2.

---

**Algorithm S.2** SOLVETHREELEVELSPARSELEASTSQUARES for solving the three-level sparse matrix least squares problem: minimise  $\|\mathbf{b} - \mathbf{B}\mathbf{x}\|^2$  in  $\mathbf{x}$  and sub-blocks of  $\mathbf{A}^{-1}$  corresponding to the non-zero sub-blocks of  $\mathbf{A} = \mathbf{B}^T\mathbf{B}$ . The sub-block notation is given by (S.7), (S.8) and (S.9).

---

Inputs:  $\{(\mathbf{b}_{ij}(\tilde{o}_{ij} \times 1), \mathbf{B}_{ij}(\tilde{o}_{ij} \times p), \dot{\mathbf{B}}_{ij}(\tilde{o}_{ij} \times q_1), \ddot{\mathbf{B}}_{ij}(\tilde{o}_{ij} \times q_2)) : 1 \leq i \leq m, 1 \leq j \leq n_i\}$

$\omega_7 \leftarrow \text{NULL} ; \Omega_8 \leftarrow \text{NULL}$

For  $i = 1, \dots, m$ :

$\omega_9 \leftarrow \text{NULL} ; \Omega_{10} \leftarrow \text{NULL} ; \Omega_{11} \leftarrow \text{NULL}$

For  $j = 1, \dots, n_i$ :

Decompose  $\ddot{\mathbf{B}}_{ij} = \mathbf{Q}_{ij} \begin{bmatrix} \mathbf{R}_{ij} \\ \mathbf{0} \end{bmatrix}$  such that  $\mathbf{Q}_{ij}^{-1} = \mathbf{Q}_{ij}^T$  and  $\mathbf{R}_{ij}$  is upper-triangular.

$\mathbf{d}_{0ij} \leftarrow \mathbf{Q}_{ij}^T \mathbf{b}_{ij} ; \mathbf{D}_{0ij} \leftarrow \mathbf{Q}_{ij}^T \mathbf{B}_{ij} ; \dot{\mathbf{D}}_{0ij} \leftarrow \mathbf{Q}_{ij}^T \dot{\mathbf{B}}_{ij}$

$\mathbf{d}_{1ij} \leftarrow \text{1st } q_2 \text{ rows of } \mathbf{d}_{0ij} ; \mathbf{d}_{2ij} \leftarrow \text{remaining rows of } \mathbf{d}_{0ij} ; \omega_9 \leftarrow \begin{bmatrix} \omega_9 \\ \mathbf{d}_{2ij} \end{bmatrix}$

$\mathbf{D}_{1ij} \leftarrow \text{1st } q_2 \text{ rows of } \mathbf{D}_{0ij} ; \mathbf{D}_{2ij} \leftarrow \text{remaining rows of } \mathbf{D}_{0ij} ; \Omega_{10} \leftarrow \begin{bmatrix} \Omega_{10} \\ \mathbf{D}_{2ij} \end{bmatrix}$

$\dot{\mathbf{D}}_{1ij} \leftarrow \text{1st } q_2 \text{ rows of } \dot{\mathbf{D}}_{0ij} ; \dot{\mathbf{D}}_{2ij} \leftarrow \text{remaining rows of } \dot{\mathbf{D}}_{0ij} ; \Omega_{11} \leftarrow \begin{bmatrix} \Omega_{11} \\ \dot{\mathbf{D}}_{2ij} \end{bmatrix}$

Decompose  $\Omega_{11} = \mathbf{Q}_i \begin{bmatrix} \mathbf{R}_i \\ \mathbf{0} \end{bmatrix}$  such that  $\mathbf{Q}_i^{-1} = \mathbf{Q}_i^T$  and  $\mathbf{R}_i$  is upper-triangular.

$\mathbf{c}_{0i} \leftarrow \mathbf{Q}_i^T \omega_9 ; \mathbf{C}_{0i} \leftarrow \mathbf{Q}_i^T \Omega_{10}$

$\mathbf{c}_{1i} \leftarrow \text{1st } q_1 \text{ rows of } \mathbf{c}_{0i} ; \mathbf{c}_{2i} \leftarrow \text{remaining rows of } \mathbf{c}_{0i} ; \omega_7 \leftarrow \begin{bmatrix} \omega_7 \\ \mathbf{c}_{2i} \end{bmatrix}$

$\mathbf{C}_{1i} \leftarrow \text{1st } q_1 \text{ rows of } \mathbf{C}_{0i} ; \mathbf{C}_{2i} \leftarrow \text{remaining rows of } \mathbf{C}_{0i} ; \Omega_8 \leftarrow \begin{bmatrix} \Omega_8 \\ \mathbf{C}_{2i} \end{bmatrix}$

Decompose  $\Omega_8 = \mathbf{Q} \begin{bmatrix} \mathbf{R} \\ \mathbf{0} \end{bmatrix}$  so that  $\mathbf{Q}^{-1} = \mathbf{Q}^T$  and  $\mathbf{R}$  is upper-triangular.

$\mathbf{c} \leftarrow \text{first } p \text{ rows of } \mathbf{Q}^T \omega_7 ; \mathbf{x}_1 \leftarrow \mathbf{R}^{-1} \mathbf{c} ; \mathbf{A}^{11} \leftarrow \mathbf{R}^{-1} \mathbf{R}^{-T}$

For  $i = 1, \dots, m$ :

$\mathbf{x}_{2,i} \leftarrow \mathbf{R}_i^{-1} (\mathbf{c}_{1i} - \mathbf{C}_{1i} \mathbf{x}_1) ; \mathbf{A}^{12,i} \leftarrow -\mathbf{A}^{11} (\mathbf{R}_i^{-1} \mathbf{C}_{1i})^T$

$\mathbf{A}^{22,i} \leftarrow \mathbf{R}_i^{-1} (\mathbf{R}_i^{-T} - \mathbf{C}_{1i} \mathbf{A}^{12,i})$

For  $j = 1, \dots, n_i$ :

$\mathbf{x}_{2,ij} \leftarrow \mathbf{R}_{ij}^{-1} (\mathbf{d}_{1ij} - \mathbf{D}_{1ij} \mathbf{x}_1 - \dot{\mathbf{D}}_{1ij} \mathbf{x}_{2,i})$

$\mathbf{A}^{12,ij} \leftarrow -\left\{ \mathbf{R}_{ij}^{-1} (\mathbf{D}_{1ij} \mathbf{A}^{11} + \dot{\mathbf{D}}_{1ij} \mathbf{A}^{12,i T}) \right\}^T$

$\mathbf{A}^{12,i,j} \leftarrow -\left\{ \mathbf{R}_{ij}^{-1} (\mathbf{D}_{1ij} \mathbf{A}^{12,i} + \dot{\mathbf{D}}_{1ij} \mathbf{A}^{22,i}) \right\}^T$

$\mathbf{A}^{22,ij} \leftarrow \mathbf{R}_{ij}^{-1} (\mathbf{R}_{ij}^{-T} - \mathbf{D}_{1ij} \mathbf{A}^{12,ij} - \dot{\mathbf{D}}_{1ij} \mathbf{A}^{12,i,j})$

Output:  $(\mathbf{x}_1, \mathbf{A}^{11}, \{(\mathbf{x}_{2,i}, \mathbf{A}^{22,i}, \mathbf{A}^{12,i}) : 1 \leq i \leq m\})$

$\{(\mathbf{x}_{2,ij}, \mathbf{A}^{22,ij}, \mathbf{A}^{12,ij}, \mathbf{A}^{12,i,j}) : 1 \leq i \leq m, 1 \leq j \leq n_i\})$

---
